

القسم الحادي عشر: الملحقات

ملحق (1): متطلبات ومعايير اداره المشاريع Project Management

• المتطلبات العامة لإدارة المشروع

يجب أن يرفق المقاول خطة وتفصــ يل لمنهجية إدارة المشــروع مع العرض الفني بحيث تشــمل نطاق المشــروع بحيث تحقق المتطلبات الآتية:

- تطبيق أفضل ممارسات ومنهجيات إدارة المشاريع المعتمدة عالميا في إدارة المشروع.
 - تحدید الهیکل التنظیمی المفصل لفریق عمل المشروع.
 - توفير نقطة اتصال واحده للمشروع (مديرا المشروع)
- تحدید أعضاء فریق العمل الذین یعملون بالمشروع بدوام كامل في موقع المشروع والمسمى الوظیفي والمهام والمسؤولیات
 لكل منهم
 - خطة لإدارة الاتصال (Communication Management): ضمن المشروع.
 - خطة إدارة القضايا والمشاكل الطارئة (Issue Management)
 - خطة إدارة التغير Change management
 - خطة إدارة المخاطر (Risk Management) : والعمليات والإجراءات المتبعة في إدارة المخاطر
- خطة إدارة التوثيق (Document Management): والإجراءات المتبعة في إدارة التوثيق من حيث مراجعة وفحص المخرجات.
 - العلاقة بمقاولي الباطن
 - الإجراءات اللوجستية لشراء الأجهزة وتسليمها وعمليات الجرد
 - مراقبة سير أعمال المشروع والتقارير الدورية لذلك

• ادارة المشروع

- تعد شروط وزارة الدفاع المفصلة في هذا الملحق جزءا من العقد.
- يعد جزءا من العقد كافة الوثائق اللازمة لتحديد نطاق العمل والتزامات المتعهد، ويشمل ذلك وثيقة طلب العروض، وعرض المتعهد، وأي مراسلات لاحقة توضلح وتوثق التزامات المتعهد وأي استثناءات أو إضافات يتفق عليها في مرحلة المفاوضات للتعاقد. ويمكن الاستعاضة عن ذلك باعتماد وثيقة شاملة تفصل جميع بنود نطاق العمل وتوضح تحديدا الوثائق التي تستبعد بناء على ذلك.
 - يقع تنفيذ هذا الحل والمشروع المبنى عليه تحت إشراف ومتابعة الجهة المشرفة على العقد بوزارة الدفاع.
- سيتم تعيين المشرف على المشروع (Project Owner) من قبل الوزارة، والذي سيمثل الوزارة في الإشراف والمتابعة والاعتماد لمخرجات تنفيذ الحل ومراحله المختلفة، ويجب أن يعمل مدير المشروع وفريق العمل المعين من قبل المتعهد تحت إدارة وإشراف ومتابعة يومية من قبل المشرف على المشروع وفريقه بشكل يومي.
- يحق للوزارة تكليف من تراه من المختصين داخلياً أو خارجياً لمراجعة وتقييم مخرجات المشروع للتأكد من مطابقتها للشروط والموصفات وعلى المتعهد تقديم المساعدات اللازمة لتمكين هؤلاء المختصين من القيام بواجباتهم.
- يعد أي تأخير في تسليم أي من المتطلبات/ المخرجات المحددة بوقت في هذه الوثيقة، سبباً لإنذار المتعهد، وقد يؤدي ذلك الى فرض غرامة تأخير أو تنفيذه عن طريق مقاول آخر على حساب ونفقة المتعهد أو إلغاء العقد وسحب كامل المشروع مع تحمل المتعهد كامل التكاليف المترتبة على ذلك.
- يجب على المتعهد الاستفادة من الموارد المتاحة في الوزارة قدر المستطاع، سواء لإدارة أو تنفيذ المشروع، ويجب عليه توضيح ذلك تفصييلياً من ناحية الأعداد والكفاءات والخبرات المطلوبة وطريقة التفرغ المطلوب.

منهجية المشروع

ينبغي على الشركات المقدمة لتنفيذ الحلول تقديم عرض تفصيلي لمنهجية تنفيذ الأنشطة الرئيسية للمشروع محل الاتفاق، والمحتوى والمدة، وطريقة تقسيم مراحل العمل والعلاقات المتبادلة فيما بينها، مع توضيع لتواريخ تسليم كل مخرج من المخرجات المنفق عليه في نطاق المشروع وفق إطار زمني تتفق مع ما يلي:

- سوف يتم اعتماد منهجية المعهد الدولي لإدارة المشاريع الاحترافية (PMI) في إدارة هذا المشروع، وذلك لإضافة عنصر داعم لنجاحه، وعليه سوف تقدم الشركة المنفذة ما يثبت قدراتها على إدارة هذا المشروع بشكل احترافي و باعتماد تلك المنهجية
- وبناء على ما سبق فإن جميع العروض تكون وفق المنهجية المعتمدة والتي تتضمن خطط عمل المشروع والجدول الزمني
 للأنشطة التي سيتم إنجازها والمسؤولين عنها.
 - على مقدمي العروض تقديم منهجية دقيقة لضمان تحقيق في كل مخرجات المشروع.

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 42 من 102

■ على المتعهد إيضاح المنهجية المستخدمة في تنفيذ وتسليم المشروع (Project Approach) من خلال تحليل متطلبات المشروع، منهجية التطوير، ومنهجية اختبار وتشعيل الأنظمة وكما هو موضح في نطاق عمل المشروع.

موظفو المشروع

فريق العمل من قبل المتعهد

- يجب على المتعهد توفير الموارد البشرية الاستشارية والإدارية والفنية المؤهلة لتنفيذ متطلبات المشروع مع تقديم ما يثبت ذلك، ويجب أن يكون لكل مرشح الخبرة اللازمة والمطلوبة في وثيقة طلب العروض كحد أدنى، كما يجب تقديم السير الذاتية للمرشحين للحصول على الموافقة الخطية أو بالبريد الإلكتروني الرسمي من قبل المشرف على المشروع. يجب أن تكون السيرة الذاتية لأي مرشح دالة على قدراته في مجال العمل المرشح له بما يكفي لإقناع صاحب القرار
- للوزارة الحق بطلب تغيير أو استبعاد أي موظف خلال مدة العقد بناء على أداءه، ويجب على المتعهد توفير البديل المناسب خلال مدة أقصاها (٢٠) أيام عمل من تاريخ إبلاغه بالتغيير ودون أن يتأثر العمل بذلك، مع التزام الأول بتسبير العمل حتى يتم تسليم ما لديه والتأكد من قدرة البديل على إكمال العمل.
- يُعَد عدم الالتزام بالمدة المحددة لترشيح وتعيين موظفي المشروع تأخيرا من قبل المتعهد وسببا للإندار قد يؤدي إلى فرض غرامة تأخير أو إلغاء العقد وسحب المشروع. ويشمل ذلك أي تأخير ينتج عن تقديم مرشحين غير مؤهلين يرفضهم المشرف على المشروع.
- يجب عدم تغيير أي موظف من قبل المتعهد إلا بعد موافقة الوزارة عليه، إلا إن كان ذلك لخروج/استقالة الموظف من العمل لدى المتعهد (أو المقول من الباطن)، ويجب في هذه الحالة إخطار الشركة والمشرف على المشروع فورا، على أن يستمر في العمل وفق المدة المنصوص عليها بنظام العمل السعودي وينقل ما لديه من عمل إلى بديل يوفره المتعهد بموافقة المشرف على المشروع.
- يجب على المتعهد (المقاول) الإلتزام بتوفير فريق العمل المطلوب لتنفيذ متطلبات المشروع حسب الكفاءات الفنية والإدارية والموضحة بجول مواصفات العمالة والشروط الخاصة.
- لوزارة الحق في التفاوض مع أي من أعضاء فريق العمل الرئيس للمشروع، ونقل خدماته إليها أو إلى متعهد آخر بعد انتهاء المشروع دون أي اعتراض من قبل المتعهد.
- يجب على المتعهد تقديم جدول زمني واضح وحسب المدة المحددة في العقد لتوفير موظفي المشروع (حسب حاجة المشروع) ويخضع الجدول للموافقة الخطية أو بالبريد الإلكتروني الرسمي من قبل المشرف على المشروع.

مدير المشروع (من جهة المتعهد)

- يجب على المتعهد تعيين مدير المشروع، وفق الشروط المتفق عليها، وذلك خلال (٢٠) أيام عمل من تاريخ استلام التعمد
- ـ يجب أن يكون مدير المشــروع متفرغا لإدارة المشــروع بدوام كامل ولا يتم تكليفه بأي أعمال خارجية، ويعمل في مكتب يحدد له في مقر الشركة/الوزارة.
- يجب على مدير المشروع التواجد بشكل دائم، وتنسيق أي تغيب عن العمل مع المشرف على المشروع خطياً أو بالبريد الإلكتروني الرسمي، سواء كان ذلك لعمل أو أجازه أو أي سبب آخر، مع ضرورة توفير بديل مؤهل لا يقل عنه خلال فترة غيابه.
 - يجب على مدير المشروع القيام بدوره على أكمل وجه وبالأعمال التالية على سبيل المثال لا الحصر:
- التمثيل الكامل للمتعهد/المقاول في جميع ما يتطلب ذلك مع الوزارة ويكون مخولاً لاتخاذ القرارات نيابة عن المتعهد والمقاولين من الباطن.
 - م متابعة وتوجيه فريق عمل المتعهد لتنفيذ متطلبات المشروع طوال مدة العقد.
- و الدارة ومعالجة العوائق والمخاطر، وتصعيد ما يلزم إلى المشرف على المشروع أو اللجنة التوجيهية للمشروع حسب الحاجة.
- التنسيق الكامل والغير مخل بما يواجه المشروع مع المشرف على المشروع بشكل مستمر حول سير المشروع،
 وأخذ الموافقات اللازمة حسب المتطلبات في هذه الوثيقة وفي العقد.
- o إدارة العلاقة مع أصحاب المصلحة من المشروع بالتنسيق مع المشرف على المشروع (Stakeholder) و إدارة العلاقة مع
- و إكمال المتطلبات في جميع مراحل المشروع (تعبئة نماذج، تحديث بيانات، متابعة إجراءات العمل) على
 الأنظمة الألية المتعلقة بإدارة المشروع في الشركة/الوزارة.
- ه الاجتماع دورياً مع اللجنة التوجيهية للمشروع (Steering Committee).

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 43 من 102

المرحلة الانتقالية

- يجب على المتعهد وضع خطة لإدارة انتقال أي مخرجات يجب استلامها وتشغيلها إلى أي جهة تخولها الوزارة، وضمان اكتمال الانتقال قبل نهاية مرحلة التشغيل بمدة (ستة) أشهر على الأقل.
- يجب على المتعهد تنسيق جميع الأنشطة الانتقالية مع أصحاب العلاقة في الوزارة والحصول على موافقتهم على أي وثائق أو تعديلات تمس عملهم.
- يتحمل المتعهد كامل المسؤولية عن ضمان سير العمل في هذه المرحلة حسب ما هو مخطط له، ولا تنتهي مسؤوليته إلا مع
 التوقيع النهائي لقبول المخرجات النهائية للمشروع.

الوثائق والمراجعات

- يعتمد نجاح المشروع على التوثيق الصحيح والمنهجي بالطرق المعتمدة عالمياً في جميع مراحله، بدءاً من مرحلة التعاقد، مروراً بمراحل التنفيذ المختلفة، وانتهاءً بوثائق المخرجات النهائية وتسليم المشروع.
- ويوضح هذا الباب متطلبات التوثيق الأساسية لهذا المشروع، علماً أنه يجب أن يحصل المتعهد على موافقة المشرف على المشروع على جاهزية وصلاحية ومنهجية كافة وثائق المشروع.

• وثيقة نطاق العمل (SOW)

- يجب على المتعهد العمل مع المشرف على المشروع لإعداد وثيقة نطاق العمل والتي تحدد مخرجات المشروع كاملة (Statement of Work)، بما في ذلك كل ما هو مطلوب في وثيقة طلب العروض وأي إضافات أو استثناءات أو تعديلات تم الاتفاق عليها في مرحلة التفاوض، إضافة إلى المنهجيات والإجراءات التي ستستخدم في تنفيذ المشروع.
- تعتبر وثيقة نطاق العمل جزءاً لا يتجزأ من العقد ولا يكتفى بها عنه ولا عن باقي ملاحقه المتفق عليها، ويجب إتمامها خلال ١٠ أيام عمل من الإخطار بالفوز.

خطة التنفيذ المبدئية

- على المتعهد تحديث الجدول الزمني للمخرجات الرئيسة (لمستويين هيكليين للمخرجات المستهدفة) للمشروع يوضح مراحل تنفيذ وإدارة المشروع ضمن المدة الإجمالية المحددة.
- للأنظمة التقنية، يجب أن توضح الخطة بداية التشغيل المبدئي (التجريبي)، وكافة مراحل التشغيل، منتهية بالقبول النهائي.
 - يجب استخدام (MS Project) إصدار ٢٠١٣ أو أحدث.

خطة التنفيذ التفصيلية

- يجب على المتعهد، إعداد خطة التنفيذ التفصيلية للمشروع (Project Execution Plan "PEP")، ويكون ذلك بالعمل
 مع أصحاب المصلحة الرئيسيين والمشرف على المشروع، علماً أنه يجب الحصول على موافقة المشرف على المشروع
 على الخطة بكامل أجز ائها وتفاصيلها.
- يجب أن تشمل الخطة جدول زمني مفصل يشمل تفاصيل الأنشطة الرئيسية، والمخرجات ومراحل التنفيذ والأنشطة الفرعية والمهام المتعلقة ومتطلبات الوقت والجداول الزمنية، والعلاقة والاعتماديات بين مراحل المشروع و الارتباط فيما بينها، وما إلى ذلك، وذلك بتقديم تفصيل هيكلي كامل للعمل بجميع مستوياته إلى آخر مستوى وحدة يمكن تقسيمها والعمل عليه عليه عليه عليه عليه عليه عليه المتخدام طريقة (وثيقة منفصلة ملحقة بوثيقة نطاق العمل) يمكن تأخير تقديمها إلى ما بعد إقرار وثيقة SOW بمدة لا تتجاوز عن ١٠ أيام عمل.
- يجب أن يشمل الجدول الزمني تحديد بداية عمل التنفيذ وتوضيح المسار الحرج الجزئي لمراحله المختلفة وكامل للمشروع.
- يجب أن تشمل تفاصيل الأنشطة المختلفة وأدوار ومسؤوليات موظفي المتعهد لكل منها حسب ما تم تفصيله في (WBS) المذكور آنفاً.
 - يجب أن تظهر الخطة بوضوح أي اعتماديات وافتر اضات على الشركة أو الوزارة ومبررات ذلك (إن وجد).
 - يجب إدارة الخطة التنفيذية التفصيلية وتمثيلها باستخدام (MS Project) إصدار ٢٠١٣ أو أحدث.

ضمان الجودة

يتحمل المورد مسؤولية جودة المخرجات التقنية. يجب أن يمنح المورد وزارة الدفاع الحق في الوصول إلى جميع بيئات الاستضافة التطويرية. تحتفظ وزارة الدفاع لنفسها بالحق في فحص وإجراء أي اختبارات و / أو قياسات ضرورية على كل أو أي جزء من الحل في أي مرحلة. تحتفظ وزارة الدفاع بالحق في رفض كل أو أي من المكونات التي لا تتوافق مع المواصفات المتفق عليها.

يجب أن يتضمن العرض الفني للمقاول على خطة ومنهجيه لإدارة الجودة واختبار الأنظمة والخدمات المقدمة بما يضمن أعلى معايير الجودة. ويجب ان تحقق المنهجية المقترحة الشروط التالية كحد أدنى وليس على سبيل الحصر:

تقديم منهجية تفصيلية لعملية اختبار الأنظمة والمنتجات تتوافق مع احتياجات الوزارة وتغطي متطلبات الأمن السيبراني في الوزارة وضوابط الهيئة الوطنية للأمن السيبراني

م الكراسة:	رقم النسخة: الأولى ر	تاريخ الإصدار:	رقم الصفحة 44 من 102

- تغطية الاختبارات اللازمة من قبل المورد قبل تسليم النظام لاختبارات قبول الوزارة (UAT) على سبيل المثال لا الحصر اخصصارات
- Unit Test, Product Test, Interface Test, Installation Test, Integration Test, Full) وكذا والاختبارات الأمنية اللازمة (Functional End to End test
- تقديم المستندات الداعمة للاختبارات المنفذة من قبل المقاول والتي سيتم مراجعتها والموافقة عليها من قبل الوزارة (Test Scope, Test Plan, Test Cases, Identified Defects)
 - سيتم عمل اختبارات قبول النظام من قبل الوزارة على مرحلتين:
 - المرحلة الأولى: من قبل فريق الجودة والاختبار من المورد.
 - المرحلة الثانية: من قبل فريق إدارة الأعمال وملاك النظام.
 - يتم البدء بالمرحلة الثانية بعد اجتياز المرحلة الأولى بنجاح وتحقيق معايير اجتياز الاختبارات.
- يجب على المورد توفير المستندات والوثائق الخاصة بالأنظمة محل التطوير لفريق الوزارة للجودة والاختبار لتمكينه من تجهيز وإعداد اختبارات الجودة التي سينفذها في مرحلة قبول المنتج.
 - يجب على المقاول تجهيز بيئة اختبارية مطابقه للبيئة الفعلية وتجهيز أي بيانات لازمه لتنفيذ الاختبار.
- يجب على المقاول تجهيز قائمه اختبار للجاهزية التشغيلية والأمنية بحيث تستخدم عند نقل النظام الى البيئة الإنتاجية للتحقق من سلامة النقل وجاهزية النظام لتشغيل.
 - . يجب على المقاول إصلاح ومعالجة المشاكل (Defects) الظاهرة في نتائج الاختبارات.

ملحق (٢): المتطلبات الفنية للمشروع

Requirement	Compliance (Yes/No/Partial)	Additional Notes/Justifications (Mandatory if "Partial" is chosen)
Deployment and Product Integration		
The solution should support all the major Firewalls such as Cisco ASA & FTD, PaloAlto, Fortinet, etc		
Solution should support integration with NSX-T,		
support should include policy visibility, risk and		
compliance report generation, change monitoring if		
added later into the solution		
Solution should support integration with F5 LTM and		
AFM, support should include policy visibility, risk and		
compliance report generation, change monitoring and		
Baseline reports.		
Solution should have Issues Center inbuilt in the GUI		
which should have focused picture of all current product issues for enhanced & timely troubleshooting		
Solution should support L3 Devices from		
Routing/Topology Map perspective such as Cisco		
IOS/Nexus, HP and Juniper if added later into Firewall		
Analyzer solution		
Risk Management		
Solution should be capable of running Risk		
Identification from Non-Secured to Secured Zones		
enforcing strong network segmentation		
Solution should allow whitelisting the Risky Traffic		
Solution should support defining an expiry date for		
Whitelisted traffic, for example "a given Risky Rule		
should be whitelisted for a period of 1 month"		
Solution should support aggregating all devices to a		
single logical unit/group to generate a group-based		
report using a single risk profile

Configuration Change Compliance Solution should generate a baseline configuration compliance report that compares device configurations
Solution should generate a baseline configuration compliance report that compares device configurations
Solution should generate a baseline configuration compliance report that compares device configurations
compliance report that compares device configurations
to production and reporte exceptions for
Cisco ASA/FTD, PaloAlto, F5(LTM & AFM) Juniper
(SRX & Netscreen), Checkpoint & Fortinet Firewalls
Solution should alert for all the policy / Configuration
changes made on the respective Firewalls
Solution should be capable of generating Reports and
charts clearly displaying changes in Baseline
Compliance with every single requirement in the
Baseline Configuration Profile
Firewall Policy Optimization
Solution should provide info on –
Redundant special case rules
Unused rule items
Disabled rules
Time-inactive rules
Duplicate object and services
Rules without logging
Rules with non-compliant comments
Rules with empty comments
Rules about to expire
Solution should report on how to tighten overly
permissive rules (IPT) on firewalls E.g., Rules having
ANY source, ANY destination, ANY service should
break down to get an actual traffic passing through that
rule
Solution should provide information on rule Reordering
with Actionable modification recommendation based
on RMPP
Suggest the most valuable Rule Reordering with an
expected improvement on the utilization of the device
based on RMPP
Solution should provide report on Object usage within
the Rule for Cleanup
Solution should provide report on both unattached and
Solution should provide report on both unattached and unused objects
Solution should provide report on both unattached and unused objects Solution should suggest consolidation of Rules for
Solution should provide report on both unattached and unused objects Solution should suggest consolidation of Rules for optimizing the rules set for better manageability, audit,

Solution should support Role based operation, allows groups of firewalls, users, and permissions, including granular permissions for report viewing and device actions	
Solution should support mapping user roles to Active	
Directory/ LDAP groups	
Solution should have a client Web interface i.e., no	
client software installation be installed to access the GUI	
Operations Management	
Solution should support running a root cause analysis	
/ query in multiple-firewall multiple-vendor environment	
Solution's Traffic Simulation query should support	
application name or service-based query to find out the	
relevant blocked and allowed policies on the Firewalls	
Solution should have GUI to customize	
Hardening/Baseline Profiles for all the supported	
devices	
Change Automation	
Solution shall provide native multiple Change Request	
Submission Methods, including:	
Native User Interface (Web Portal)	
Native XLS/CSV Parsing	
Solution shall provide native capability to automatically	
Determine Devices Requiring Policy Change	
Solution shall provide native capability to automatically	
Proactively Assess Risk of Proposed Changes	
Solution shall provide native capability to automatically	
create Plan Vendor Specific Implementation Plans	
Solution shall provide native capability to automatically	
Implement or Stage New Policies/NSGs On Cisco	
ASA, PaloAlto via Panorama, Fortinet via	
Fortimanager, Checkpoint via Smartcentre server,	
Juniper SRX & Netscreen, Cisco ACI and VMWware	
NSX-T	
Solution shall provide native capability to automatically	
Validate the Accuracy of Changes Post-	
Implementation	
Solution shall provide native capability to automatically	
Map Historical Change Requests To Security Policies	
on devices	
Solution shall provide native capability to expose Rule	
Removal automation	
Solution shall provide native Traffic Request	
Recertification, focusing on recertifying the traffic &	
business need of historical requests Solution shall provide native Object Management &	
Automation, focusing on manipulating object contents	
based on direct requests (Add/Modify/Delete)	
To assess an impact on critical Application during	
Firewall/Server	
migration/upgradation/decommissioning the proposed	
NSPM solution should allow conducting an Impact	
Analysis from Business Application perse where it	
should list down all the applications which will be

impacted during Firewall/Server migration/upgradation/decommissioning project	
Solution shall automatically map Business Applications to Change Requests, which originate from changes to	
the application flows	
General Features	
In its normal operation mode (without faults or	
customizations), the proposed solution should allow	
instant and scheduled simulations on the following	
basis:	
a. Onceb. Daily (Every 1 to 7 days on a specific time)	
c. Weekly (Every 1 to 4 weeks on a specific day	
and time)	
d. Monthly (Every 1 to 4 months on a specific date	
and time)	
e. i.e., Every two months repeating on 7 and 23	
at 02:00 PM, starting on Thursday, September 7th, 2024.	
7111, 2024.	
The proposed solution should be able to run parallel	
simulations with multiple agents. The proposed solution should let the users update the	
agents with a single click on the management.	
The proposed solution should be a software-only	
solution to automatically test the effectiveness of the	
security controls used by the organization via the	
below-stated terms.	
The proposed solution should provide adequate	
information for each attack simulation to identify each attack in any of the security devices under test.	
The proposed solution should provide access to MITRE	
ATT&CK framework coverage in the web interface for	
each simulation.	
The proposed solution should be able to show	
success/failure scenarios in the MITRE ATT&CK	
framework on a tactical and technical basis in the web interface.	
The proposed solution should provide zero false-	
positive results which means any attack reported as	
not-prevented by installed security controls can be	
proved as such. Upon request, the supplier will perform	
the necessary work to prove truthfulness of the not	
prevented attack status.	
The proposed solution should be able to test the security efficacy of client, network, virtualization, and	
cloud security systems of the institution by performing	
attack simulations among software components that	
can be installed in a distributed structure.	
The proposed solution should be able to assess the	
security level provided by a group of endpoints and/or	
network security technologies that work in isolation or are integrated with other security systems,	
independent of the underlying vendor and technology.	
The proposed solution should simulate attacks, report	
findings, and be able to propose mitigations	

	<u> </u>
continuously and a near-real-time basis for each attack scenario.	
The proposed solution's components should run attack	
simulations among its components and should not	
initiate connections to any production applications and	
endpoint systems to provide a risk-free assessment	
unless configured for lateral movement. Endpoint security control assessments should be	
constrained in the designated computer system(s) and	
this assessment process should not interact with other	
systems unless configured for lateral movement.	
The proposed solution should be able to integrate with	
Palo Alto Cortex XSOAR to create custom playbooks to develop specific scenarios to improve analysts'	
effectiveness.	
The proposed solution should be able to integrate with	
Palo Alto Cortex XSOAR for the following purposes:	
a. Create custom playbooks to develop specific	
scenarios to improve analysts' effectiveness.	
b. After a new threat is added to the Threat	
Library, use Cortex XSOAR to schedule an	
attack simulation.	
c. Pull mitigation suggestions directly from the	
Platform's mitigation library into Cortex	
XSOAR and use them in the playbooks to	
accelerate automation.	
See which threats were blocked or missed and remediate gaps automatically	
API and Integrations	
The proposed solution should have the following	
features available for GET functions via API:	
a. Agent List and Details	
b. Integrations and Integration Details	
c. Mitigation Device List and Signature List	
d. Simulation List and Details	
e. Detailed Simulation Results	
f. MITRE Mapping for Simulation Results	
g. Threat Template Operations	
Threat List and Detailed Information	
The proposed solution should have the following features available for POST/PUT/DELETE functions via API:	
a. Agent Token Information	
b. Create/Start/Stop/Update/Delete Simulation	
Create Threat Templates	

رقم الصفحة تاريخ الإصدار: رقم النسخة: الأولى رقم الكراسة: 49 من 102

رقم النسخة: الأولى

The proposed solution should support integration and communicate with other solutions based on an "Application Control Interface" (API) access or the Syslog protocol, for purposes such as:	
 a. Customized reports 	
 b. Customized dashboards 	
c. Integration with third party solutions like SOAR,	
SIEM or other platforms	
d. Creating Dynamic & Static Templates	
e. Creating Simulations & Re-run Simulations	
f. Export Mitigations	
Export Threat Lists	
The proposed solution should be able to integrate with	
ticketing and communication systems such as:	
ServiceNow	
Threat Library & Threat Templates	
The Threat Library included in the proposed solution	
shall receive updates on a near daily basis.	
The proposed solution should provide emerging threats	
without any extra licenses. If needed, extra licenses	
should be included in the offer.	
The proposed solution should provide ready to use	
static threat templates for Emerging and Suggested	
Threats that can also be modified by the user for customized needs.	
The proposed solution should provide ready to use	
dynamic threat templates for Security Posture	
Management such as Readiness Against	
Ransomwares, Readiness Against APT Groups, and	
Security Control Rationalization such as Network	
Security (IPS/IDS & NGFW Testing, WAF Testing, DLP	
Testing, Web Security Gateway Testing), Endpoint	
Security Testing, and Émail Security Testing.	
The proposed solution should provide the	
aforementioned dynamic templates to be customized	
by the user.	
The proposed solution should provide the custom	
creation of dynamic templates with filters such as;	
Threat Name, Tags, Attack Category, Threat Actors,	
Unified Killchain, MITRE ATT&CK Tactics, Affected	
OS, Severity, and Release Date.	
The proposed solution should be able to automatically	
add newly added attacks to the dynamic templates	
without user intervention.	
The proposed solution should allow users to simulate	
all available attack module actions for posture visibility.	
The proposed solution should use real-world malicious	
attack payloads for File Download, Email, and Web	
Application Attacks while testing network security	
controls. Threats contained in the threat database should be	
referenced according to the following set of information,	
including but not limited to:	
	<u>l</u>

رقم الصفحة

51 من 102

تاريخ الإصدار:_

رقم الكراسة:__

رقم النسخة: الأولى

a. Unique identification number of the threat	
(unique ID)	
b. Release date of the threat	
c. A text-based description of the threat SSO	
d. The severity of the threat is according to the	
following scale: Low, Medium, High.	
e. Affected Platforms, f. Targeted Sector,	
g. Largeted Regionh. Attacker's Objectives,	
i. Actions,	
j. Payloads, Executed Process Command Lines	
or Hash Values based on Attack Type,	
k. References in publicly known databases:	
virustotal	
I. References in the following industry-	
recognized threat scoring and enumeration	
systems: CVE, CWE, CVSS, OWASP.	
Operating systems affected by the threat	
The proposed solution shall allow assessment results	
of "blocked" and "not blocked" threats to be exported	
via CSV format.	lulo
Network Infiltration (File Download) Attack Mod The proposed solution's attack database should	uie
include at least 1800 (one thousand and eight hundred)	
network infiltration (file download) threats in the threat	
library.	
The proposed solution should support HTTP & HTTPS	
protocols for testing network security controls. All	
applicable Network Infiltration (file download) attacks	
should run over these protocols.	
The proposed solution should be able to support	
browser agents for quick IPS/IDS/Web Gateway	
testing over HTTPS.	
Email Infiltration Attack Module	
The proposed solution should perform SMTP tests from the internet to the corporate domain.	
The proposed solution should perform URL attacks by	
using the SMTP protocol from the internet to the	
corporate (email) domain.	
The proposed solution should perform Attachment	
attacks by using the SMTP protocol from the internet to	
the corporate (email) domain.	
The proposed solution should support an agentless	
Email Simulator for email attack tests.	
The proposed solution's attack database should	
include at least 1400 (one thousand four hundred)	
unique email threats in the threat library.	
Web Application Attack Module	
The proposed solution should perform Web Application	
Attacks over both HTTP and HTTPS. The proposed solution should allow users to change	
HTTP and HTTPS default ports.	
The proposed solution's attack database should	
include at least 204 (two hundred and four) unique web	
application attack signatures in the threat library.	
	1

The proposed solution should use actual threat payload	
for security control assessment rather than using	
"PCAP playing" for web application attacks.	
Endpoint Attack for Windows Module	
The proposed solution should imitate malicious	
• •	
methods used by APT's (Advanced Persistent Threats)	
while testing Windows endpoint security controls,	
without infecting the underlying operating system.	
The proposed solution should cover at least 120	
MITRE ATT&CK Enterprise framework techniques for	
Windows operating systems.	
The proposed solution's attack database should	
include at least 110 (one hundred and ten) unique	
windows endpoint scenarios in the threat library.	
Endpoint Attack for Linux Module	
The proposed solution should imitate malicious	
methods used by APT's (Advanced Persistent Threats)	
while testing MacOS endpoint security controls, without	
infecting the underlying operating system.	
The proposed solution's attack database should	
include MacOS endpoint scenarios in the threat library	
Data Exfiltration Module	
The proposed solution should be able to validate	
endpoint and network DLP solutions.	
The proposed solution's attack database should	
include at least 19 (nineteen) unique data exfiltration	
samples in the threat library.	
The proposed solution should cover exfiltration	
techniques at least over HTTP, HTTPS, and TCP	
protocols.	
The proposed solution should cover at least XOR	
Encryption and Base64 Encoding obfuscation methods	
URL Filtering Module	
The proposed solution should be able to validate	
solutions like Proxy and URL filtering.	
The proposed solution's attack database should	
include at least 20 (twenty) URL categories with at least	
7000 URLs.	
The proposed solution should be able to enable users	
to customize the result decision to prevent false	
positive result decisions.	
Custom Attack Module	
The proposed solution should allow users to create	
custom Windows Endpoint Scenario attacks using	
MITRE ATT&CK framework action library with at least	
1000(one thousand) Endpoint Scenario Actions	
available.	
The proposed solution should allow users to create	
custom Network Infiltration (File Download) attacks	
using existing threat library with at least 8000(eight	
thousand) malicious files available.	
The proposed solution should allow users to create	
custom Web Application attacks using the existing	
threat library with at least 2000(two thousand)	
malicious payloads available.	
-1	1

رقم النسخة: الأولى رقم الكراسة:	تاريخ الإصدار:	رقم الصفحة 52 من 102
---------------------------------	----------------	-------------------------

The proposed solution should allow users to upload their custom Web Application payloads to the Threat Library.	
The proposed solution should allow users to create	
custom Email attacks using the existing threat library	
with at least 7400(seven thousand and four hundred)	
malicious files available.	
The proposed solution should allow users to upload	
their custom Malicious Codes or Vulnerability Exploits	
to the Threat Library.	
The proposed solution should allow users to create	
custom Data Exfiltration samples using the existing	
threat library with at least 200 (two hundred) sample	
files available.	
The proposed solution should allow users to upload	
their custom attacks for web application attack, email	
attack, network infiltration attacks and data exfiltration attack modules.	
The proposed solution should allow users to add Play	
and Rewind processes with the following information to	
be added:	
a. Path and Argument	
b. Ability to Add a Remote File	
c. Ability to Use a Local File	
d. Define Result Logic	
e. Metadata Information	
Action Details	
Mitigation	
The proposed solution should display the utilization and	
effectiveness level of a vendor technology, expressed	
as a percentage, number of blocked and not blocked	
threats per simulation.	
The proposed solution should uniquely identify and associate mitigation signatures with threat library	
content, by presenting a signature ID associated with	
each threat in the threat library.	
The proposed solution should present and classify	
signatures and mitigations by severity and category	
(web application attacks, vulnerability exploitation,	
malicious code) of the related threats.	
The proposed solution should allow the status of "not	
blocked" threats and signatures to be exported via CSV	
format.	
The proposed solution should allow signatures or	
threats to be searched and filtered using threat, action	
or signature names.	
The proposed solution should allow users to filter	
mitigation suggestions based on simulations.	
The proposed solution should allow users to filter non-temporing Maluyers. Engine signatures to be shown or	
tempering Malware Engine signatures to be shown or hidden on demand.	
For security gaps revealed during the web application	
and network infiltration assessments, the proposed	
solution should provide vendor-specific mitigation	
suggestions on a dedicated dashboard on the	
interface.	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 53 من 102

For security gaps revealed during the Windows Endpoint Scenario and Email assessments, the proposed solution should provide generic mitigation suggestions on a dedicated dashboard on the interface. The proposed solution shall allow using "vendor severity" to filter signatures to prioritize and start mitigation actions. The proposed solution should be able to provide specific mitigation suggestions for the following network security solution vendors: a. Check Point (network intrusion prevention functionality)

Management & Security
The proposed solution's Management should be able
to operate both On-Premises and in an Air-Gapped
Environment.
The proposed solution should allow users to create
custom dashboards for selected simulations.
The proposed solution should assess Endpoint,
Network and Email Security controls running on
physical, virtual and cloud systems, via a unified
Windows agent supporting Windows 10 and 11 Client
OS versions and 2016, 2019 and 2022 Server OS
versions.
The proposed solution should assess Network and
Email Infiltration, Data Exfiltration controls running on
physical, virtual and cloud systems, via a unified
MacOS 11 Big Sur, MacOS 12 Monterey operating
systems running on Intel or M1 based processors.
The proposed solution should assess Network and
Email Infiltration, Data Exfiltration controls running on
physical, virtual and cloud systems, via a unified Linux
x86 and x64 based OS (Redhat 7, Redhat 8, CentOS
7, CentOS 8, Ubuntu 18.04+, Debian 9+).
1, COINCO O, ODMINU 10.071, DODIMI 01).
7, Genicos o, Obuniu 10.04+, Debian 9+).

	<u> </u>
Heartbeat – The proposed solution should automatically verify the connectivity requirements among its attack components and immediately report any identified connectivity problems before each assessment.	
The proposed solution should allow setting up of each agent so that mitigation suggestions can be generated according to a list of vendor technologies.	
The proposed solution should have at least certificate- based, encrypted communication and authentication measures to secure communications among its software components.	
The proposed solution should be able to support the 2FA with Authenticator Apps.	
The proposed solution should support SSO (Single Sign On) with SAML (OCTA and Azure AD) and LDAP. The proposed solution should allow administrators to	
access Audit Logs via Web UI and analyze with filtering options.	
The proposed solution should allow administrators to configure Syslog Integration to forward Audit Logs via TCP or UDP to a log collector as CEF or JSON formats.	
The proposed solution should allow administrators to export Audit Logs via CSV file.	
The proposed solution should allow for the creation of multiple and customizable profiles - (i) admins, (ii) analysts and (iii) viewers with monitoring authorization levels only. Customizable options should be as follows: a. Simulations b. Templates c. Agents	
d. Custom Threatse. Custom Actionsf. REST API Tokeng. Organization Managementh. Mitigation	
Detection Analytics Module	
The proposed solution should have the ability to analyze whether the threats in the tested attack vectors are detected and alerted on "Security Information and Event Management" (SIEM) and Endpoint Detection and Response (EDR) solutions by connecting to the relevant solution platform(s).	
When connecting to the SIEM and EDR solutions, the proposed solution must provide a connection via" API "using username-password authentication or token.	
After the proposed solution has been configured for integration with SIEM or EDR solutions, it should be able to provide a warning in case of problems with access.	
When setting connectivity with relevant logging solutions to prevent failure and validate log data, the proposed solution should have a dedicated functionality to automatically test the accuracy and correct operation of user-defined queries.	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الاصدان	رقم الصفحة
رقم اعتراسه	رقم النسعة. الروق	تاريخ الإصدار:	55 من 102

The proposed solution must have the required infrastructure that can be integrated with the following	
technologies:	
a. Chronicle SIEM	
b. CrowdStrike EDR	
c. Elastic SIEM	
d. Exabeam SIEM	
e. FortiSIEM	
f. IBM Qradar SIEM	
g. Logrhythm SIEM	
h. Logsign SIEM	
i. Micro Focus Arcsight ESM	
 Microsoft Defender for Endpoint EDR 	
k. Microsoft Sentinel SIEM	
Palo Alto Cortex XDR	
m. Rapid7 InsightIDR SIEM	
n. RSA Netwitness SIEM	
o. Securonix SIEM	
p. Sentinel One EDR	
q. Splunk SIEM (Onprem & Cloud)	
r. Trellix Endpoint Security (HX) ÉDR	
s. Trellix Enterprise Security Manager SIEM	
t. Trend Micro XDR	
VMware Carbon Black EDR (Onprem & Cloud)	
The proposed solution must provide an interface to	
determine when queries are made after the attacks are	
terminated. (Delay Time)	
The proposed solution must provide an interface to	
determine a time frame to compensate for small-time	
differences between agents and the management	
server. (Early Time)	
The proposed solution must provide an interface to limit	
the number of raw logs imported from SIEM to the	
management server to avoid high resource	
consumption on IBM QRadar and Splunk solutions.	
The proposed solution must provide an interface to	
define a limit on concurrent queries that can be made	
to the SIEM/EDR solution to perform detection analysis	
on parallel threats at the same time.	
The proposed solution should have an interface that	
can show MITRE ATT&CK framework coverage	
according to the detection results of Windows Endpoint	
Scenario attacks.	
The solution should report the total number of	
simulated threats logged, not logged, or alerted, not	
alerted for each simulation. A list of detection results for	
blocked and not blocked threats will be given.	
The proposed solution should support detection	
analytics outcomes to be displayed according to attack	
categories (File Download, Web Application, and	
Windows Endpoint Scenario Attacks).	
The proposed solution should provide an interface to	
visualize and compare the detection status in the last	
7/30/90 days.	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة
	<i>E3</i>		56 من 102

The proposed solution should be able to show the prevention and detection status of any simulated threat	
on the same simulation result dashboard.	
The detection analytics, the proposed solution will be	
able to show the "start time" of the simulated attack,	
"the end time", "the time between two periods" and in	
addition, the "logging time", "the time between the end	
of the attack and logging", "the time between the end	
of the attack and the occurrence of the alert".	
The proposed solution should be able to output in CSV	
format for the purpose of reporting detected or not	
detected threats, and it should be able to show whether	
an alarm was raised following a simulated attack or not.	
The proposed solution should be able to output Threat	
Detection Results in a PDF report with logged or not	
logged, and alerted or not alerted threats.	
The proposed solution must have an infrastructure that	
checks whether "event data" that occur because of	
each attack simulation generate alerts.	
Alert results for the Endpoint Scenario Attacks should	
be matched with MITRE ATT&CK framework	
techniques and tactics by the proposed solution.	
The proposed solution should validate the events or	
logs collected from the systems it is integrated with	
(namely Log Management, SIEM or EDR solutions) to	
show those events or logs specifically related to each	
simulated threat and display it to the user.	
The proposed solution should be able to allow users to	
select whether to store raw detection log output from	
data sources.	
 a. It should be possible to store raw logs. 	
It should be possible to define the maximum number of	
raw log entries replied per query in each simulation.	
Detection Analytics Content	
The proposed solution should be able to provide Log	
Source Information to log necessary actions.	
The proposed solution should be able to provide	
Detection Content for following SIEM or EDR vendors:	
a. Arcsight ESM SIEM	
b. Carbon Black EDR	
c. CrowdStrike EDR	
d. IBM Qradar SIEM	
e. Microsoft Sentinel SIEM	
Splunk SIEM	
The proposed solution should be able to provide	
Detection Content as open-source SIGMA rules for	
other SIEM/XDR/EDR vendors.	
The proposed solution should allow users to view all	
rule recommendations for actions via a dedicated UI	
section. Solution should allow to filter "Not Alerted"	
actions.	
Reporting	
The proposed solution should report the total number	
of attack simulations executed, together with the	
number of blocked and not blocked attacks with, for	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 57 من 102

each simulation. A list of total attacks blocked and not blocked will be given.	
The proposed solution should be able to export the	
vendor specific mitigation suggestions list with	
Signature ID, Signature Name, Vendor Severity, Not	
Blocked Action Count, Score Impact information in	
CSV (comma separated values) format.	
The proposed solution should provide a graphical	
interface to compare the security status changes in the	
last 7/30/90 days.	
The proposed solution should be able to enable users	
to generate custom reports, select content of the report	
and schedule them to be automatically sent to defined	
emails.	
The proposed solution should allow individual	
simulation reports to be generated for prevention and	
detection or only for prevention results in CSV and PDF	
formats on demand.	
The Solution should be able to export weekly and	
monthly executive and technical reports in PDF format.	
Monthly and weekly executive technical reports for all	
simulations in the system will be generated	
automatically.	
Users should be able to manage executive and	
technical reports' auto-generation preferences on	
Reports Settings for weekly and monthly reports.	
Users should be able to see the simulations that they	
are authorized to see in their reports.	
When weekly and monthly reports are created, users	
should be notified by mail. The people to whom the	
notification emails will be sent should be determined	
from the settings screen. Users should be able to generate reports from	
"Dashboard" and "Simulation History" pages.	
Users should be able to select simulations, report	
content (prevention, detection or both), report sections	
(from predefined sections) and edit report description	
in the report generation flow.	
The Solution should allow individual simulation reports	
to be generated for prevention and detection or only for	
prevention results in CSV and PDF formats on	
demand.	
The proposed solution should be able to share	
benchmark values for top 5 most simulated threat	
template results.	
The proposed solution should be able to share	
benchmark values for MITRE ATT&CK Tactics.	
The proposed solution should be able to notify users in	
Dashboard and via Email;	
a. When a simulation agent is down,	
b. When an integration agent is down,	
c. When an integration is unhealthy,	
d. When the overall score falls below or rises	
above a custom set threshold or defaults score	
change updates compared to 7 days ago.	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 58 من 102

The proposed solution should be able to move laterally to achieve a defined objective by the admin. The proposed solution should be able to operate with both cloud and on-prem management platforms. The proposed solution must not require an agent to do the validation. The proposed solution should allow users to initiate the actions with following binary executables: a. Execution via APC Injection b. Execution via APC Injection c. Execution via APC Injection c. Execution via APC Injection c. Execution via APC Injection d. Execution via Call-Back The proposed solution should have the following attack methods in this module: a. Lateral Movement b. Kerberoasting c. Local Privilege Escalation d. Harvesting and Spreading Actions The proposed solution should have the following harvesting actions available: a. Local Service Misconfiguration Enumeration b. Remote Management Users' Enumeration c. Session Enumeration d. LSASS Credential Dumping e. Domain Object Enumeration f. Domain Object Enumeration f. Domain Dispect Enumeration h. Domain Trusts Enumeration i. End-User Driven File Classification	
Ability to apply classification to Microsoft Office files -	
Word, Excel and PowerPoint	
Ability to show classification add-in in Office apps -	
Word, Excel and PowerPoint	
Ability to present users with guidance (tooltip) on	
classification labels in office apps - Word, Excel and	
PowerPoint	
Ability to suggest/recommend classification for Office	
files to the user based on keywords and pattern	
recognition	
Ability to seek justification from the users on	
downgrading the label or violating the suggestion	
Ability to prompt the user to mandatorily classify MS	
Office files - Word, Excel and PowerPoint	
Ability to apply bulk classification on multiple files in	
explorer	
Ability to change / update classification for files	
Ability to de-classify files	
Ability to automatically apply EDRM controls based on	
file classification label	
Language Support: Arabic, English	
End-User Driven Email Classification	
Ability to apply classification to emails within Outlook	
Ability to show classification add-in in MS Outlook	
Ability to present users with guidance (tooltip) on	
classification labels within Outlook	
Ability to suggest/recommend classification for emails	
to the user based on keywords and pattern recognition	
within Outlook email message and attachments	
Ability to seek justification from the users on	
downgrading the label or violating the suggestion	
Ability to prompt the user to mandatorily classify emails	
Ability to auto-upgrade email classification based on	
attachments	
Ability to change/update classification for emails	
Ability to de-classify emails	
Ability to automatically apply EDRM controls based on	
email classification label	
Ability to prevent user from sending emails to blacklisted domains	
Ability to allow users to send emails only to whitelisted	
domains	
Language Support: Arabic, English Granular EDRM Controls	
Restrict file access and usage to specific users and/or user groups	
Ability to provide read-only permission	
Restrict editing of files by unauthorized users	
Restrict entiring of files by unauthorized users	
Restrict soft copy printing e.g., Print to PDF/Save as	
PDF	
Restrict copying content from a file to an external	
location	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 60 من 102

	-
Ability to provide full controls on files to specific users	
and/or user groups	
Restrict sharing of permissions by unauthorized users	
Restrict running macro on files by unauthorized users	
Block screen capture via PrtScr key or third party tools	
like Snaglt, Camtasia	
Block screen sharing via conferencing tools (e.g.,	
Webex, GoToMeeting, etc.)	
Block file access via remote connections (e.g.,	
Windows RDP)	
Block file access on virtual environments (e.g., VDI,	
Citrix environments, virtual machines)	
Allow file access while offline	
Restrict file access while offline	
Allow for different set of permissions for a user when	
he/she is accessing the file online vs offline	
Restrict saving unprotected copy with 'Save As' and	
other similar options	
Ability to save file in PDF format without the need to	
have full control permissions	
Enforce same set of controls when files accessed in	
native application vis-à-vis accessed online via	
browser	
Advanced EDRM Controls	,
Restrict file access to a specific computer	
Restrict file access to a specific mobile device	
Restrict file access and usage based on date, time	
Restrict file access and usage based on number of	
days	
Expire all copies of a file remotely at any time	
Restrict file access to a particular IP address	
Restrict file access to a range of IP addresses	
Same level of security in collaboration with internal and	
external users	
Dynamic EDRM Controls	
Change permissions on a file after delivery	
Revoke access of users instantly and remotely	
Revoke access in real-time as soon as user gets online	
even though user has offline permissions on the file	
Replicate access of users instantly and remotely	
Replace access of users instantly and remotely	
End-user Driven Protection	
Protect one or multiple files simultaneously	
Ease of use - Right Click on a file/multiple files and	
enable protection	
Protect email attachments of any file format	
Enable different policies for individual users or user	
groups for the same file	
Allow usage controls to be saved as 'Policy templates'	
Ability to protect a file with one/multiple policy	
templates	
Enable protection on a file from within a native Office	
application	
Enable domain based protection/access for recipients	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 61 من 102

Protect email body and attachments while sending	
emails via Outlook client on the desktop	
Set ad-hoc usage controls on email message and	
attachment in context to the email recipients i.e. users	
outside of the email recipient list should not gain access	
to the protected email and attachments.	
Protect attachments while sending emails via OWA	
Visual Markings and Classification Metadata	
Ability to apply visual markings like header/footer to MS	
office files and emails	
Ability to add classification metadata/x-header to	
classified files & emails	
Ability to preserve classification metadata even when	
the file is DRM protected for ease of interoperability	
Ability to preserve the metadata even on file conversion	
- i.e. MS office file is converted to PDF	
Ability to show an icon overlay for classified files,	
EDRM protected files	
Dynamic Watermarking	
Enforce watermarked viewing of protected files	
Enforce watermarked viewing of protected files even	
when the file is accessed in the native applications	
Enforce watermarked printing of protected files	
Ability to configure dynamic watermark content	
(Classification, date, time, username, etc.) Enforce watermark printing of protected files in browser	
Enforce watermark printing of protected files in a	
browser	
Display a combination of static and dynamic content in	
the watermark	
Display watermark on files accessed on mobile devices	
(iOS and Android)	
Customize the font and color of watermark content	
Automated Protection	
Automatically protect office files on close	
Automatically protect email body and attachments	
(from the server side) without any user intervention	
based on certain parameters like Sender, Recipient,	
Subject, metadata (x-header) tags	
Protect incoming emails and attachments from	
particular senders automatically without any user	
intervention	
Protect incoming emails and attachments from all	
senders to a particular email address without any user	
intervention	
EDRM Security for Email	
Send protected emails from Windows Outlook client	
Send protected emails from Mac Outlook client	
Send protected attachments from Windows Outlook	
client	
Send protected attachments from Mac Outlook client	
Send protected attachments from OWA	
Give permissions to distribution lists to access	
protected emails and attachments	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 62 من 102

Ability for the recipients to automatically extend permissions on protected email and attachments to additional users	
Ability to set ad hoc security on emails and attachments for the recipient list only	
Track protected emails and attachments from within Outlook itself	
Revoke access to protected emails and attachments from within Outlook itself	
Set expiry date for protected emails	
Protect incoming emails and attachments automatically without any user intervention	
Encrypt and Decrypt .pst files	
Track audit logs for decrypted .pst files	
Automatic protection of emails based on custom metadata/tag/label fields tagged by 3rd party systems	
e.g., Discovery, Classification, and DLP systems	
View protected emails (body and attachment) from the browser on your desktop – without the need for a	
particular email client or software	
Reply to protected emails from the browser on your	
desktop or mobile - without the need for a particular	
email client or software	
Authentication	
Ability to authenticate users via Windows Active Directory	
Ability to authenticate users via Microsoft Azure Directory	
Ability to authenticate external users with their personal	
or work account	
Single sign-on (SSO) capabilities with Google	
Single sign-on (SSO) capabilities with Microsoft Azure	
Works with other identity/SSO solutions like Ping, Okta	
Ability for external users to access a file with a	
temporary one-time password (OTP) without creating	
an account	
Support for 2FA with time based OTP (TOTP) Support any authentication providers with OpenID	
Connect protocol	
End-user experience with EDRM Files and Ema	IIS
View protected files online on Windows and Mac	
desktop platforms without installing any software	
Edit protected files online on Windows and Mac desktop platforms without installing any software	
View protected emails online without installing any	
software or depending on any particular email client	
Reply to protected emails online without installing any	
software or depending on any particular email client	
Open protected files in native applications	
Access to files according to permissions set by the file	
Owner	
Unprotect files on desktop for users will permissions	
Open protected files online directly from SharePoint	
Online, OneDrive, and Teams	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 63 من 102

Open protected files in native applications from SharePoint Online, OneDrive and Teams	
Access protected files on any browser	
Access protected files on any device (Windows OS, MacOS, iOS, Android)	
No dependency on OS to access protected files/emails on desktop or mobile devices	
No dependency on application license to access protected files/ emails on desktop or mobile devices	
External users can access protected common non- office formats like PDF, png, jpeg, txt, etc. without installing any specific tool or software	
Support for Dynamic Watermark viewing	
Ability to extend permission on protected files/emails	
Ability to automatically extend permissions on email and its attachments on 'Email Forward/Reply/Reply All' to any new recipient added without the need to do anything outside of the context of sending the email	
Ability to request for permissions on protected files/emails	
Access protected files with Save-back functionality from within the integrated app to avoid/reduce the need for file download	
Seamless and consistent external user experience with protected emails and/or files	
Security widget within the file to display the usage permissions for a user on the protected file	
Administration - General	
Segregation of duties: Support for different	
administrator roles based on scope of work	
Ability to create security admin user profiles	
Ability to create power users (business users) for managing groups	
Ability to view installation report detailing agent installations throughout the organization	
Centralized license management for admins	
Ability to auto-assign license based on usage	
Customized user interface with your company's logo	
Administration - Classification Policies	
Must offer an Admin GUI for classification policy administration	
Ability to define and configure classification label list	
Ability to define color for different classification labels	
Ability to define a tooltip for each of the classification labels	
Ability to define sub-labels for a classification label	
Ability to define font size, color, text alignment for Header, Footer visual markings	
Ability to configure EDRM protection policies for a classification label	
Ability to define blacklisting of emails domains	
Ability to define whitelisting of email domains	
Ability to define priority for classification labels	
Ability to create exceptions (for a certain set of users) against the label policies	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 64 من 102

performed by the user Dashboards	
Ability to log date/time on which the activity was	
user needs	
Report builder tool for easy custom reporting based on	
performed on files and emails by users	
A web-based audit trail for all classification activities	
Ability to import/publish logs into SIEM tools	
utilization/adoption analytics	
Ability to provide overall system health and	
Monitor license utilization	
parameters	
Ability to provide unified view of major risk and usage	
reporting	
Ability to export audit logs for regulatory compliance	
Ability to export activity logs for monitoring purposes	
performed by the user	
Ability to log date/time on which the activity was	
and disallowed operations	
Machine name, file location on users device, Allowed	
Address, Device,	
Ability to log forensic details - Name, Email ID, IP	
user needs	
Report builder tool for easy custom reporting based on	
activities performed on all files by all users	
A web-based audit trail and dashboard for all EDRM	
Reporting	
Ability to revoke access for a specific user/user group	
files, emails for external users	
Ability to track and revoke access to EDRM protected	
files, emails for internal users	
Ability to track and revoke access to EDRM protected	
the day's activities on protected files	
Daily digest email sent to file owners summarizing all	
activities performed by users on EDRM protected files	
Instant email alerts to file owners for unauthorized file	
Tracking	
and EDRM policies	
Single GUI to manage and administer Classification	
menu option in explorer	
Ability to enable/disable classification via right click	
within MS Office apps - Word, Excel, PowerPoint, Outlook	
Ability to enable/disable classification via in-app menu within MS Office apps Word Excel PowerPoint	
or both	
Ability to publish classification for documents or email	
documents and emails	
Ability to configure mandatory classification for	
and Outlook	
Ability to configure default classification in Office apps	
groups	
Ability to publish classification labels to users, user	
keywords and patterns	
Ability to configure content discovery policies based on

Solution must offer a centralized dashboard for	
executive reporting via Insights into Risks - Present and	
Averted	
Solution must offer a centralized dashboard for	
executive reporting on EDRM protected data	
Solution must be able to show trends over a period of	
time for Risks	
Solution must be able to show trends over a period of	
time for EDRM protected data	
Solution must be able to show a map-based view for	
risky activities performed Solution must be able to show a map-based view for	
risky activities prevented	
Solution must be able to show unauthorized activities	
performed based on domain of users	
Dashboard for EDRM protected data with filters on	
time-period	
Centralized dashboard for executive reporting via	
Insights into Risks - Present and Averted	
Solution must be able to show trends over a period of	
time for Risks	
Operating System Support	
All major Windows versions	
All major MacOS versions	
iOS devices	
Android devices	
File Formats and Applications Support	
Microsoft Office files: doc, docx, xls, xlsx, ppt, pptx,	
docm, pptm, xlsm	
PDF files	
txt and other ASCII-based files	
OpenOffice formats: odt, ods, odp, odf, odg	
Image files: jpg, jpeg, bmp, png, gif, tiff	
All major Microsoft Office versions: 2016, 2019, and	
Microsoft 365	
All major OpenOffice versions: 4.x	
All major Adobe Reader versions: XI, DC	
All major LibreOffice versions: 6.x	
All major Windows versions: 8.1, 10	
Deployment and Customer Support	
Availability as a hosted service in cloud	
Availability to deploy on-premises	
Ability to deploy in hybrid mode	
Single agent/client for Digital Asset Classification	
Silent installation of agent via central deployment tools	
for Windows and MAC	
Support for cloud-based system in a private cloud	
Support for seamless migration from cloud-hosted to	
on-premises deployment	
Support for automated patching of apps using app	
stores	
Support for automatic and silent client upgrades	
Acceptability of different mondon of amount in Dustantian	
Availability of different modes of agent i.e. Protection	
mode and Receiver mode Availability of 24x7, SLA-bound support

	<u> </u>
Data Classification professional consulting services	
Access to delivery and on-going account management	
team for successful roll-out and on-going adoption of	
the technology	
Network Detection & Response / Mandatory Re	aquirement
Detect Performance and Scalability	oquii omoni
The solution must have a very high scalable platform that can	
support different options for sensors and analyzers/brains, supporting up to 75Gbps in a one rack unit analyzer with the	
different sensors types (Virtual, Physical) and sizes	
(1,15,20,50 Gbps) connecting to the same console/brain.	
The solution must have the option to deploy sensors for the	
virtual environments such (Vmware ESX, Hyper-V, KVM)	
The solution must be passive to the network i.e. not taxing	
network performance.	
The solution must operate effectively and efficiently in an air-	
gapped environment without external influence i.e. people or	
other technology.	
The detect must be agentless (no agent to be used for any	
purpose).	
The solution must not require traffic decryption.	
The solution must have capability to use one rack unit server	
that is working as sensor and brain to process the traffic.	
The solution must have one server with 4 ingest ports which	
allow to ingest traffic from 4 ports The solution must be able to store the detections in the the	
brain.	
Detect Analysis and Automation	L
The solution must automatically identify and classify threats,	
including attack phase and risk, without requiring any manual	
work to build/tune the use cases	
The solution must have a Al Triage Advisor page to create	
triage rules automatically using machine learning and Al.	
The solution must be behavioral based only (signatureless).	
The solution must differentiate key assets from other hosts	
for risk prioritization.	
The solution must possess a mechanism to automatically	
show the confidence of detection when threats are detected	
based on anomalies	
The solution must have single dashboard for detections that	
correlates multiple networks detections together	
automatically	
The solution must have host quadrant severity that shows two	
values (certainty score and threat score). The solution must be able to automatically differentiate	
between general botnet behaviors and those that are more	
likely to be targeted threats.	
The solution must be able to detect botnet behavior including	
DDoS, external vulnerability scanning, Bitcoin mining, etc.	
The solution must be able to detect hidden tunnels within	
HTTP, HTTPS, and DNS used for command-and-control and	
data exfiltration.	
The solution must be able to detect the use of algorithmically	
generated domains or DGAs	
The solution must be able to detect custom RATs (remote	
administration tools) from normal user traffic	
The solution must be able to detect unknown command &	
control (no reputation history) using other traffic attributes	
The solution must be able to detect data exfiltration independent of user identity or ID address.	
independent of user identity or IP address

			0

The solution must be able to detect internal reconnaissance of an attacker	
The solution must be able to detect reconnaissance using	
slow or "paranoid" network scans	
The solution must be able to detect improper use of	
administrative and management protocols, including RDP,	
SSH, iDRAC, and IPMI	
The solution must be able to detect activation of sub-OS	
rootkits using port hijacking	
The solution must be able to detect remote execution of	
procedure calls or code via SMB or DCERPC protocols	
The solution must be able to detect privileged access	
analytics use cases by observing the privilege for the	
(account, host and service).	
The solution must be able to detect automatically re-	
categorize behaviors that are caused by approved systems	
or usage, e.g. network scanners	
The solution must be able to detect advanced C&C detection	
is the foundation	
The solution must be able to detect all hosts that have	
connected to the C&C infrastructure	
The solution must be able to detect highlight relevant lateral	
detections between hosts	
The solution must be able to detect attacker activity across	
multiple hosts to give comprehensive campaign view	
The solution must be able to automatically identify and outline	
attack campaigns	
The solution must list all user accounts and show two main	
metrics (threat score certainty score)	
The solution must use AI to do the Triage and eliminate the	
manual work from the security teams and saving time and	
mandal work from the security teams and saving time and	
halp the security teams to feeus on what matters	
help the security teams to focus on what matters.

The latest war to the OZOV of the MITDE	
The detect must cover more than 97% of the MITRE	
ATT&CK network based attackers tactics	
The company must have patents published in MITRE	
D3FEND.	
The solution must detect network-based threats within	
encrypted traffic without the need of decryption	
The solution must detect custom or unknown threats, where	
there is no signature or IP/domain reputation history based	
on behavior	
The solution must focus on attackers behaviors (TTPs) not	
just simple anomaly models with generic ML approach.	
The solution must cover all infrastructure devices (Windows,	
Mac, mobile devices, BYOD, IoT, routers, firewalls)	
The solution must use multiple behavior techniques	
(Supervised Learning, Unsupervised Learning, Deep	
Learning).	
The solution must analyze and correlate all network traffic	
direction: (North, South) and (East, West) traffic.	
The solution must secure the data center within the virtual	
environment as well as the underlying infrastructure	
The solution must use Stream to forward metadata into	
external storage to make threat hunting and more	
investigation.	
The solution must allow to upload STIX file for signature	
detection.	
The solution must learn automatically the Privileged Access	
Analytics for (host, account, and service privilege).	
The solution must use observed privilege to strengthen zero-	
trust access.	
Modeling of Threats	
The solution must incorporate global attack behaviors and	
techniques to detect threats on the local network.	
The solution must use global modeling of threats to be	
combined with local network learning to improve accuracy	
and relevance for the local network	
The solution must detect potentially-malicious anomalies	
based on deviation from learned local norms within the	
network	
The solution must detect threats within new devices or	
devices that were already compromised when baselined	
The solution must not use a generic approach to build its	
unsupervised models	
Analysis	
The solution must maintain network packet captures PCAP	
of detected attacker behaviors	
The solution must not depend on NetFlow/logs as a data	
source only.	
The solution must use raw network traffic (PCAP) for real-	
time analysis	
The solution must utilize Artificial Intelligence capabilities to	
augment and automate SOC operations	
The solution must create shareable link from the UI interface	
for specific detection to be shared with a user who does not	
have an account on the UI interface	
have an account on the UI interface The solution must allow to Tag the host from the UI interface	
The solution must allow to Tag the host from the UI interface.	
The solution must allow to Tag the host from the UI interface. The solution must allow to create a Note on the host and	
The solution must allow to Tag the host from the UI interface. The solution must allow to create a Note on the host and account from the UI interface.	
The solution must allow to Tag the host from the UI interface. The solution must allow to create a Note on the host and	
The solution must allow to Tag the host from the UI interface. The solution must allow to create a Note on the host and account from the UI interface. The solution must allow to assign a user to specific detection	
The solution must allow to Tag the host from the UI interface. The solution must allow to create a Note on the host and account from the UI interface.	

رقم النسخة: الأولى رقم الكراسة:	تاريخ الإصدار:	رقم الصفحة 69 من 102

The solution must support access and search using RESTful	
API.	
Types of Threats	
The solution must detect remote access tunnels used by attackers to control compromised systems	
The solution must detect hidden tunnels over HTTP, HTTPS, or DNS to communicate with C&C or to exfiltrate data	
The solution must detect web-based Command and Control	
(not relying on IP reputation or threat lists) The solution must detect malware using a fake browser	
The solution must detect multihomed domain fronting.	
The solution must detect relay hosts.	
The solution must detect relay hosts. The solution must detect malware getting new instructions	
The solution must detect malware replicating a payload to /	
exploiting vulnerabilities against other hosts	
The solution must detect TOR anonymization	
The solution must detect peer-to-peer traffic	
The solution must detect Botnet monetization behaviors:	
Click Fraud, Bitcoin Mining, outbound DoS, outbound SPAM	
The solution must detect ransomware activity: encrypting file shares	
The solution must detect network reconnaissance scans: port	
scans, port sweeps, scanning unused IPs.	
The solution must detect privilege anomaly like Privilege escalation, accounts take over, credentials theft and misuse.	
The solution must detect the use of a stolen credential from	
its normal system, but asking for unusual services or in	
excessive volume	
The solution must detect a host trying many credentials to attempt to gain access to a server	
The solution must detect Kerberos service scans	
The solution must detect fake Kerberos servers	
The solution must detect brute force attacks	
The solution must detect RPC reconnaissance	
The solution must detect the use of administrative protocols,	
including RDP, SSH, IDRAC, and IPMI, where the target host	
is not typically administered by the source host on that	
protocol	
The solution must detect activation of a sub-OS rootkit using	
an "knocking" byte sequence on a common port	
The solution must detect a host gathering unusual volumes of data and then sending exfiltrating to an external IP	
The solution must detect a host being used as a relay to	
exfiltrate data to an external system	
The solution must detect enumeration of file shares	
The solution must detect AD/LDAP reconnaissance using	
techniques similar to Bloodhound	
The solution must detect use of PowerShell/WMI and RPC to	
move laterally via remote code execution	
The solution must detect use of stolen RDP client tokens	
The solution must detect reconnaissance of RDP servers	
The solution must detect reconnaissance of RPC servers	
The solution must detect the use of PS exec and other remote administration tools to move laterally via SMB	
The solution must detect a host being used as a relay for	
command and control purposes to gain access deeper into	
the network	
Integrations and Response	
The Detect must natively integrate with EDR vendors like	
Microsoft Defender ATP, Carbon Black , FireEye,	
SentinelOne, Cybereason and CrowdStrike.

The solution must have an option to lock down host and user	
accounts manually by pressing a button in UI interface.	
The solution must have an option to lock down host and user	
accounts automatically by integrating with SOAR solutions.	
The solution must able to ingest traffic from TAPs solutions.	
The solution must provide API-driven access to all events,	
hosts, and scoring information for integration with other	
security solutions (NAC, SOAR, FW, EDR) & ticketing	
systems.	
The solution must integrate with AD to lock down user	
account by surgically freeze account access and avoid	
service disruption by disabling accounts (auto and manual)	
Operations	
The solution must have automatic update to reduce the	
operational burden of the solution.	
The solution software must be updated with a regular	
frequency to adapt to the constantly evolving threat	
landscape.	
The solution must provide appropriate commentary around	
the detection including appropriate triggers as well as steps	
to verify and where to begin potential remediation.	
The solution must enrich its metadata/detections/hosts with	
the info that will help improve the IR approach, natively and	
without complex integrations (Host ID)	
The system must meet all the requirements without using any	
VPN or cloud connection.	
The solution must not send any data outside the organization	
or using any cloud processing.	
The solution must be able to provide health monitoring via	
email and syslog.	
The solution must be able to show health monitoring in UI	
interface.	
The solution must be able to alert on individual threats or	
suspicious hosts via email and syslog	
The solution must provide granular role-based access control	
(RBA(:) into the various elements of the product so security	
(RBAC) into the various elements of the product so security

			11 من 102

Device and License Installation	
The solution installation must include sensor devices and	
Brain.	
The solution must include Detect solution and license	
installation.	
The installation must include traffic analysis (topo).	
The installation must include one triage session.	
The installation must include sensor and Brain communication and configuration.	
The license must be software subscription and support per	
active IP.	
Sensors	
The vendor must have a scalable platform that can support	
different options for sensors and brains, supporting up to	
75Gbps in a one rack unit analyzer with the different sensors types (Virtual, Physical) and sizes (1,15,20,50 Gbps)	
connecting to the same console/brain.	
The solution must have capability to use one rack unit server	
that is working as sensor and brain to process the traffic.	
The solution must be available with X29 type sensors	
The solution must have one server with 4 ingest ports which	
allow to ingest traffic from 4 ports	
The sensor must have two management ports with 1 Gbps.	
The sensor must have ability to ingest 15 Gbps traffic in one	
device.	
Total cost of ownership	
No need to move infrastructure to cloud e.g., On-	
Premises AD to Azure AD, On-Premises exchange to	
exchange online, etc.	
No need to upgrade infrastructure to latest versions	
e.g., Windows 10, Microsoft O365, etc.	
Key Management	
Protected content and keys are kept separate for hack-	
Pluggable energation: Bring your Own Energation	
Pluggable encryption: Bring your Own Encryption	
Keys are never embedded within the protected file	
Reporting & Analysis	
Out of the box reports	
Customized reporting	
Reports via subscription	
Privilege risk dashboard	
Analysis of privilege use across endpoints	
Analysis of privilege sprawl over time	
Authentication	
Access to the system must be controlled by a log-on	
procedure incorporating individual user identifiers and	
passwords.	
The solution must restrict target-account-specific	
entitlements of end users individually or by group or	
role	
Solution must contain up to three tiers of approval	
Supports contextual zero trust by making secondary	
MFA authentication mandatory when selecting	
sessions.	
Support built-in access certification	
Integration	

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 72 من 102

Removing	application-to-application	hardcoded	
passwords.			
Allow session	s to be started via any SSH o	r RDP client	
Integration wi	th Microsoft LAPS		
Third-party va	ault integration		
Architectur	e		
The propose	ed solution shall support	distributed	
network archi	tecture where different segme	ents need to	
be supported	from a central location.		

" Enterprise Architecture Requirements" ملحق (٣): متطلبات ومعايير هيكلية تقنية

#	Category	ltem
١	S	The deployed components (such as processes or technologies) shall be standardized/ adhered to best
	ent	practices. Customization should be kept to a minimum while deploying.
۲	General Architecture Requirements	The deployed components shall be configurable, and maximum level of customization recommended by
	i e	providers should not be exceeded.
٣	D	The deployed components shall fit the business purpose and be aligned with Enterprise Business Target
	8	Operating Model and strategy.
٤	<u>ə</u>	A component should be used for which it was originally developed for. Best practices, COTs (Commercial
	뢌	off the shelf) standards, and IT related Frameworks - where fit - shall be used to develop IT Solutions to
0	Ę Ę	enable IT Services. Each component (processes, data, applications, services, technologies and platforms) shall be
	Ë	documented, and the documents shall be kept up to date for any evolution or update on the components.
٦	Ā	
· ·	<u>a</u>	Each component must be secured against unauthorized access.
	Je	Each technology component should be scalable vertically and horizontally.
٨	ē	Technological diversity should put in control while preventing vendor lock in technology provision.
٩	U	Acquiring new IT components shall be governed by Enterprise Architecture. The acquirement of new IT
		Components shall be justified.
١.		Decision should be taken to decommission any IT component if no longer serving business needs or if its
		cost of support and maintaining is higher than acquiring and migrating to new assets that fit the purpose.
11		The licenses should be managed to only pay for what will be utilized.
17		Technology should be a leader in its domain and should be obtained from a financially stable vendor. A
		Well-established Open-Source product can be considered given that it is a leader in its domain, and a
		continuous enhancement to that product is owned by a leading vendor in addition to the support and maintenance. When obtaining an Open Source Product, no modification is allowed in the source code of
		the product until it is very well negotiated and approved by the vendor, and the vendor confirm it will be
		considered in the product future releases.
۱۳		Enterprise Architecture maintain and update an approved list of technology vendors, and any exception
		to this list should be approved first by Enterprise Architecture management.
١٤		Technologies and solutions shall be Obtained and implemented while focusing on enabling Business for
		MoD and considering military trends and new aspects. IT Services/Infrastructure shall be defined from
		the Business perspective and best practices, not based on the IT technology deployed to deliver that
		service.
10		Measurement of IT Service performance should be relevant to Business impact and value. Reporting of
		service performance should clarify business impact.
1	φ vi	IT initiatives shall concentrate and move toward achieving MoD digital mission and needs.
2	i tr	IT services should be offered through easy to use web enabled access and responsive multi-channel
	ü ec	interfaces while ensuring Omni channel.
3	ire ire	APIs exposure should be considered when designing the eServices and should be exposed by developed
	Architecture Requirements	services.
4	Re	Digital related initiatives shall understand MoD user characteristics, users' culture and behaviour to better
		address their digitalization needs, and should enable user feedback and input throughout the digitalization
	Digital	lifecycle.
5)iC	The solution should enable the Contextual feature in the digital channels such as user preferences,
	_	location, personalized interactions and services through application of data analytics and insights.

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 73 من 102

6		The solution shall ensure privacy, security, and ethical use for the users' data through digital channels.
1	ure nts	Technological diversity should be controlled as the cost of integration between various technologies has
	tecture	to be considered. Technology adoptions will be constrained by the approved technologies.
2		Technology components should adopt the state-of-art technology to utilize new adapted technology
	ri uir	trends, ensure long term support and Return on Investment (ROI).
3	Archi Require	The technology components should support interoperability, adaptability, portability, and scalability.
4	∝	Infrastructure components must support availability targets to minimize downtime for mission critical
		applications. DR concept should be available for mission critical applications/services and should support
	ø	Recovery objectives.
5	ture	Data shall be stored in reliable infrastructure, be backed up and archived using leading solution and
	n	according to defined policies.
6	str	Technology architecture should consider Virtualization and Containerization when developing the
	ras	architecture.
7	重	The technology should support the transfer to cloud-based services.

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 74 من 102
	652		74 من 102

#	Category	ltem
1	Application Architecture Requirements	Re-use Before Obtain Before Build, for new business requirements, the vendor should consider first reusing existing technology capabilities. If not applicable (such as huge customization is necessary to fulfil the new requirements, or existing technology does not have the necessary capabilities, or such will violate Architecture requirements and IT Standards) then consider obtaining new technology, if the market cannot provide such solution, then apply in-house build to satisfy such needs.
2	ure Rec	Service oriented approach (SOA) should be adopted in acquired Solutions to improve reusability and reduce duplication, these solutions will have loosely coupled components that can be referenced across multiple applications.
3	ect	Enterprise Service Bus (ESB) shall be used to decouple applications from specific software solutions.
4	on Archit	Microservices should be used when there is a need for agile application that demand high delivery speed, the application is big enough to justify the use of Microservice, Application domains are clear and linked to business to micro-service them, and Infrastructure and technical team are ready to operate such environment.
5	licati	Solution should support layered architecture, for example, separate presentation layer from business logic layer and data layer.
6	Арр	The vendor should follow a well-recognized and best practiced development methodology when developing a solution.
7		The Developed or acquired IT solution should address existing requirements and expected future needs, and should have a broader view than a single application-based solution. The solution should have a broader view and should consider integration with existing solutions.
8		Acquired technologies shall not be vendor locked, where vendor capabilities will constraint MoD strategic improvement and future priorities.
9		Applications should be user friendly. The underlying technologies must be transparent to the users.
10		Adapt common look and feel user interface, ensure easy to use interface, Applications should enable easy switching between different languages, particularly English and Arabic, and support internationalization and localization. The solution should allow the alteration of its behavior without resorting to code change.
11		An appropriate on-line and offline documentation should be available to guide users and to help solve problems.
12		The Application shall enable the IT Operation to measure, document, and report its availability and performance.
13		Application should be fault tolerant with error handling capability.
14		Application should be available from customer perspective in the frame of agreed service levels: the availability targets should be defined from user perspective and according to system criticality. Application activity should be traceable through history of operation transactions, audit logs, and error
16		logs. MoD IT Target Architecture will be used to guide the decision of technologies adoption for business
		functionalities. This is to: Ensure the alignment with industry standards and best practices, Ensure agile and cost-effective Architecture, •
		Provide unambiguous decision of the required capability for each functionality, Prevent capability overlap of IT Applications, Identify capability gaps.
1	ints	Data has to be managed as an asset that has value to MoD. The business should have access to the right information at the right time to enable making the accurate decisions.
2	ireme	Information model and common data dictionary should be used for business, operational and technical views. Naming rules should be followed to create new data entities.
3	n b	The data shall be maintained in central environment and shared according to business relevancy.
4	ire Re	It should be specified which application type components in the landscape will serve as the system of record or reference for enterprise master data.
5	itectu	The IT solution shall ensure confidentiality, integrity and access control while sharing Data. Data sources shall be maintained through CRUD matrix.
6	Data Architecture Requirements	The movement of information between users and systems shall be captured efficiently. Lack of knowledge of information flows will lead to duplicate integrations and inappropriate decisions on how to satisfy information consumers.
7	ata	Data should be retained according to MoD regulations and data policies.
8	Δ	Archiving and retention policies should be defined per information entity.
9		MoD IT Target Architecture shall be used to guide the decision of Data blocks definition and modelling to enable business functionalities.

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة حد محد
	, ,	, C.	75 من 102

#	Category	ltem
1	ts	Integration between systems should utilize standardized technologies and built-in APIs whenever
	ë	possible.
2	Ē	Enterprise Service Bus shall be used for any communication between the Business applications.
3	Ē	API Gateway shall be used by external consumers for any business application.
4	Integration Architecture Requirements	Applications and modules should expose built-in APIs to enable systems integration.
5	&	The APIs shall support mainstream programming languages.
6	<u>e</u>	Customization of API is not allowed unless necessary and approved by Enterprise Architecture.
7	ğ	Integration between systems shall use standard technologies (such as REST).
8	Ji E	The services should be linked in a loosely form to enable process, in which, no interdependence between
	힏	individual services are there.
9	₹	Seamless integration should be allowed for external systems with MoD systems: the integration
	<u>ö</u>	architecture shall be designed so that any changes required to deal with new changes in external systems
	ä	are as least disturbing as possible.
10	-g	Service Oriented Architecture (SOA) approach shall be used to generalize the service case with the
	ž	consideration of dynamic configurable scalability to promote the service re-use.
11	_	Service interface and implementation specifications should be in a registry to enable services search and
		to eliminate the possibility of overlap between services.
12		Integration layer shall maintain unique ID for each process execution for the purpose of tracking all
		systems activities related to the process execution.
13		Integration patterns/methods shall be defined based on best practices.
14		Each API shall have declared purpose, specified consumer(s), and Identification of the granularity level
		of the API.
15		APIs versioning shall be managed to ensure compatibility and flexibility.

ملحق (٤): معايير البنية التحتية

#	Category	ltem
١	farm	The solution should comply with the industry definition of Composable Infrastructure; where the physical compute, storage and network (compute) fabric resources can be assembled and configured in various
۲	server	combinations to improve the efficiency and accelerate application serviceability. The solution should provide resources that are logically pooled so that administrators don't have to physically configure hardware to support a specific software application. Instead, the software's developer
٣	Dense	defines the application's requirements for physical infrastructure using policies and compute profiles. The composable solution should be able to provide internal and external storage simultaneously using industry standard protocols
٤ ٥	High	Internal (DAS, SAN, iSCSI) External Storage (FC-SAN, iSCSI, NAS etc)
٦	ent (The solution should support the use of application programming interface (API) to create (compose) the infrastructure it needs to run on bare metal, as a virtual machine (VM) or as a container.
٧	uirem	The offered solution be able to optimize any application and store all data on a single infrastructure with fluid pools of physical and virtual compute, storage, and fabric.
٨	ıbə	The proposed Solution should be based on blade server enclosure/chassis architecture.
9	Fe Fi	The enclosure (itself) should provide consolidation of compute, fabric and storage resources.
,,,	ndwo	The proposed solution's enclosure/chassis should support half-height, full-height or full-height double-wide compute modules. This would ensure the solution can run any kind of workload and better VM density in case of virtualized workloads.
11)Common Compute Requirement (High Dense server farm	Vendor will have to make sure that all the components within the proposed solution are tested to work together and there should be no compatibility or interoperability issues between the hardware (compute, network & storage) and software components (management, hypervisor, OS, software defined compute & storage elements) or the solution.
١٢	Ŏ.	Vendor will have to make sure that the firmware and driver versions are fully compatible and tested with the proposed solution.
١٣		The solution should have the ability to flexibly scale up and scale down as the workloads dictate and precisely align operating expense to actual usage.

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 76 من 102

١٤		Proposed solution should be able to host/provision traditional applications (bare metal/virtual) that are
		designed to support and automate existing business processes such as collaboration, data processing and
		analytics, supply chain, and web infrastructure.
10		The solution should be able to host/provision new breed of applications and services which drive revenue
		and new customer experiences by leveraging Mobility, Big Data, and Cloud Native technologies.
١٦		The solution (as a one infrastructure) should be able to host Virtualized, bare-metal, containerized and
		hyper-converged (based on software-defined-storage) workloads. The actual requirement of hosting
		different servers in a single enclosure/chassis may vary and could span on multiple enclosures/chassis.
		However, vendor should offer the solution in the best consolidated manner.
۱۷		The solution should be able to host variety of compute nodes/servers (homogenous and heterogeneous
		within a single enclosure) having 2-socket or 4-socket CPU architecture. This would ensure better VM
		density (in case of virtualization) compared to a homogeneous 2-socket processing node. This would also
		provide better consolidation within the datacenter.
١٨		Vendor should clearly mention the throughput or backplane capacity of the enclosure/chassis.
19		The proposed enclosure/chassis should support interconnect/switching modules with active/active or
		active/backup network connectivity.
۲.		The proposed system's bandwidth and throughput should be aligned with the bandwidth (Ethernet,
		FC/FCoE & ISCSI) required per server and there should be no bottle neck in the architecture.
۲۱		Blade Server Speciation
77		Dual Sockets and four socket with the following specifications:
77		2 or 4 x Intel Xeon Cascade lake or newer
7 £		
70		Each CPU should have 24-cores with the base frequency of 2.1GHz and 45M cache.
		576 GB of DDR4 RAM on each server expandable up to 3 and 6 TB respectively
77		Vendor should mention the scalability of the memory and CPU on each blade server
77		Each blade server have one Converged Network Adapter with 2 x 25/50G CNA ports.
47		For future upgrades blade server should support additional CNA ports or HBA ports
44		Each network card (CNA) should support physical or virtualized functions for the ease of management and
		better data throughput.
#	Category	ltem
٣.		The enclosure should provide a composable physical storage module/node which should be able to provide
	בַ	direct attached storage or shared storage space to the compute nodes internal or external to the
	<u>a</u>	enclosures.

٤٣		Network connectivity between multiple cabinets as the solution should be able to spread across several
		racks. The solution should optimize east-west traffic and should enhance the application performance by
		providing clustering between the nodes/enclosure/chassis without the need of having top-of-the-rack
		switches.
٤٤		Network resources should allow granular configuration and allocation of bandwidth to compute resources
		(VMs or OS).
٤٥		Network configuration should allow dedicated quality of service within the compute resources; this should
20		
		be in addition to the network (physical switch based) quality of service. This would ensure optimized east-
		west traffic and better application serviceability.
٤٦		The proposed architecture must support out-of-band management solution. True and end to end Out-of-
		Band Management is a must requirement as it allows to manage infrastructure during security problems,
		Routing and Spanning Tree Protocol loops and Denial of Service attacks. In case of network attack the
		operations team should have network access (GUI, CLI) to the overall stack.
٤٧		The compute fabric (network) should offer disaggregated, rack-scale design architecture to consolidate
l		data center network connections, reduce hardware and management complexity, and scale network
		bandwidth across multiple enclosures.
٤٨		Interconnect/Switching module should support Ethernet as well Fiber Channel connectivity using a single
		module.
٤٩		Each switching module should support minimum of 600Gb of uplink bandwidth and 600 Gbps of downlink
i i		bandwidth (internal server connectivity). Each downlink port can be carved up (physical) into multiple ports
i i		(Ethernet, FC), and the administrator should be able to configure separate downlink speeds using Ethernet
		or FC protocols or both simultaneously. This provides the administrator to control the bandwidth availability
		for the operating system/application.
٥,		The network interface card (converged network adapter) on the compute nodes should support following
		functionalities:
٥١		IEEE quality of service (QoS) 802.1p tagging
٥٢		IEEE 802.1Q virtual local area network (VLAN)
٥٣		
		TCP, IP, UDP checksum offload, Large Send Offload (LSO), TCP, Segmentation Offload (TSO)
#	Category	<u>Item</u>
٥٤	ε	It should support overlay networking on host performance with tunnel offload support for VXLAN and
	a	NVGRE
	4	It should support Single-Poot I/O Virtualization (SD IOV) which provides a machanism to hungas the back
00	5	It should support Single-Root I/O Virtualization (SR-IOV) which provides a mechanism to bypass the host

۲۸		Common Dashboard for all managed arrays through a single management console.
#	Category	Item
۲٩	ŧ	Data migration through same console for all supported heterogeneous arrays
٣٠	Вe	On-premise analytics like performance analysis, workload planning etc. through a single console.
٣١	uire	End to end connected topology view in pictorial format within management console, from Hypervisor to Storage arrays. At-least one of the hypervisor among VMware of Hyper-V shall be qualified.
٣٢	Req	In case, vendor need any additional service like clustering / federation for managing multiple arrays from a single console — then all required accessories like dual Ethernet switches, cables shall be provided upfront for at-least 8 arrays.
٣٣	age	In case of power failure, storage subsystem shall have de-staged mode so that un-committed information can be protected. De-staging shall happen to redundant vault drives and vault drives shall be encrypted.
٣٤	SAN Storage Requirement	Vendor shall not use any Vault drive as data drives for capacity calculation. Vendor shall not consume any additional drive slot in the drive enclosure for vault drives.
٣٥	X X	Offered storage shall have cloud enabled monitoring, Al support and analytics engine for proactive Storage management
٣٦	Ø	and risk mitigation. All required licenses for same shall be included in the offer.
٣٧		Cloud Enabled Monitoring and analytics engine shall have capability to provide following: Providing Firmware upgrade and patch upgrade recommendations proactively along with release notes and with
		awareness of the peripheral infrastructure connected to the array. Dashboard shall clearly highlight whether there is any issue with array with respect to best practices and shall
۳۸		recommend the required action, if any.
٣9		Providing extremely granular per-minute historical capacity and performance trend analysis by default, without the need to enable extra logging, install any appliances (physical or virtual), or install any software.
٤٠		Providing overall saturation level of the array while combining while analyzing various parameters like IOPS, MB/sec, Block size etc.
٤١		Providing the status of at-least top 5 volumes where latency is extremely high.
٤٢		Vendor cloud enabled monitoring and analytics engine shall be completely integrated with their support team so that it
		can provide history of support cases logged with Support team under different column like Critical, Normal and low severity along with closed cases. Cloud monitoring tool shall be able to provide the complete month-wise breakup.
٤٣		Shall be able to provide the executive Dashboard covering various critical and must aspects of Total Capacity, overall
		health / wellness score of array. De-duplication and compression ratio, over-all front-end performance etc.
٤٤		Cloud enabled Analytics engine shall have capability to provide following:
٤٥		Shall have capability of global learning – Analytics engine shall collect control information from at-least 50000+ arrays across vendor installed base for meaningful output. Vendor shall provide the documentary proof for it.
٤٦		Analytics engine shall have capability of proactive recommendation for arresting the issues / problems noticed at other install base of vendor after identifying the problematic signature.
٤٧		Cloud enabled monitoring and analytics engine integration with Hypervisor
٤٨		Offered Cloud enabled monitoring and analytics engine shall be tightly integrated with Hypervisor layer and shall be certified to work with at-least VMware.
٤٩		Hypervisor integration shall be able to provide end to end monitoring of hypervisor Datacenter, Data-store, Hypervisor Host and VMs running within the hypervisor datacenter and shall be able to link with offered storage array.
٥,		Cloud monitoring and integration tool shall provide the detailed analysis of CPU Contention, Memory contention, IO contention for each VM – including the latency.
01		Cloud monitoring and integration tool shall have capability to identify the top VMs which are contributing towards maximum IOs and Latency.
۲٥		In case vendor doesn't support the above offered functionality then Vendor shall supply the enterprise license for VMware vRealize suite for at-least 20 Physical servers, each running with dual physical CPUs.
٥٣		Offered Storage management engine shall have in-built on-site edge analytics for performance engine, without connectivity to Internet / Intranet and shall offer following functionalities: All required license for offering this functionality
0 £		Shall have saturation panel which can depict the overall saturation level of the storage array at different time intervals
00		instead of looking into individual parameters like IOPS, CPU utilization, Cache utilization etc. Shall have capability to display top 5 volumes by hotspots as well as by latency.
٥٦		If similar nature of arrays being used in the environment then offered engine shall show the top systems by saturation
٥٧		Shall have capability at storage for tagging the Storage volume to given host applications so that performance charts
٥٨		can be drawn for application instance for easy management and troubleshooting. Offered storage shall advise about Placement of application on best fit system based on saturation, free usable capacity
٥٩		and saturation forecast after application tagging. Offered storage shall be supplied with unlimited license for creation of application consistent copies for Oracle, SQL,
4		Exchange, SAP HANA and VMware through Storage console GUI. Offered Storage shall be supplied with in-built copy management and backup S/W unlimited license for movement of
٦.		data copies of Oracle, SQL, Exchange, SAP HANA and VMware to disk based backup device, public Cloud like AWS, Azure and object storage. In case, vendor doesn't support this feature then additional 100TB Front-end capacity, full
H .		featured backup s/w shall be supplied.
77		Offered storage array shall be tightly integrated with VMware and shall be certified for VVOL.
77		Shall be certified for vVol based replication
• 1		Shall support more than 25,000 vVol and at-least 5000VMs using Vvol.

٦٤		Shall support both compression and de-duplication.
#	Category	Item
٦٥ ٦٦		Shall be qualified to work with both Fiber Channel and ISCSI. Offered Storage array shall be integrated with Red-hat OpenShift, Kubernetes and other industry K8 based container platform through CSI driver set. Vendor shall support at-least following functionalities through their CSI / CSP integration.
٦٧	ire	Shall support both Static and Dynamic provisioning
٦٨	ıbə	Shall be able to expand, re-size the persistent volumes given to statefulset applications.
٦٩	Ω. Ω.	Shall be able to create and delete the snapshots.
٧.	ag	Shall support CSI Raw block volume as well as CSI Volume cloning.
<u> </u>	SAN Storage Requirement	Support for both Fiber channel as well as ISCSI. Offered storage array shall support quality of service for critical applications so that appropriate and required response time can be defined for application logical units at storage. It shall be possible to define different service / response time for different application logical units.
٧٣	•	Quality of service engine shall allow to define minimum and maximum cap for required IOPS / bandwidth for a given logical units of application running at storage array.
٧٤		It shall be possible to change the quality of service Response time (In both milliseconds as well as Sub-milliseconds), IOPS, bandwidth specification at real time.
٧٥		The storage array should have support for controller-based snapshots (At-least 1024 copies for a given volume).
\ \ \		Offered Storage array shall support more than 32000 base volume on the storage array without snapshot and clone. Offered storage shall support non-disruptive online firmware upgrade for both Controllers and disk drives without any
		controller reboot.
٧٨		The storage array should support hardware based data replication at the array controller level across all models of the offered family.
٧٩		Offered Storage array shall support both Synchronous and Asynchronous replication across 2 storage arrays natively without using any third party or software based solution.
۸۰		Offered Storage array shall support 3 Data center solution natively where Primary site shall be able to replicate synchronously to near-by / Bunker location and at the same time shall be able to replicate to Far location asynchronously.
٨١		In case of Primary site failure – Far site shall have capability to pull the incremental information from Near-by / Bunker location natively without using any third party or software based solution.
٨٢		Offered storage array shall have capability to create the application consistency group for replication operations. Shall have flexibility to have more than 256 volumes per consistency group.
۸۳		Offered storage subsystem shall support incremental replication after resumption from Link Failure situation or during failback operations between 2DC or 3DC solution
٨٤		Offered storage array shall be true multi-tenant and shall support more than 512 Tenant per storage array. Every tenant shall be treated as a separate logical storage array with its own user control access

#	Category	Item
١	ses	Detailed and intensive site-survey is a must for all sites before ordering, and preferably during bidding to ensure proposing the correct BOQ and avoid missing any items.
۲	ervic	Any missing items during the implementation that affects the setup, or the end-to-end architecture will be the bidder responsibility.
٣	Professional Services	The bidder shall provide all designs and architecture development from the main vendor aka (HLD, LLD, NIP,NRFU) and testing.
٤	i j	Design and Configuration should not suffer from any SOF (Single Point of Failure).
٥	SSS	Racking and Stacking along with the needed configuration in all sites are the bidder responsibility.
٦	Profe	Environmental readiness in all sites where the cabinets will be installed is the bidder responsibility, aka (Cabinets, Powering, Cooling, Cablingetc)
٧		Installation, Configuration, and Integration must be from the main vendor.
٨		Project management and all coordination tasks are part of the bidder responsibility.
١	ses	The bidder shall provide all needed and specialized training classes/seats for all components and technologies provided for 5x members in each class.
۲	Services	If the class is associated with online/international certifications, the bidder must include all the fees associated.
٣	Training	Classes preferred to be within the kingdom but not on-site.
٤	Trai	Out-of-Kingdom classes (if needed/offered), accommodation and transportation fees should be included in the seat charges.

1	S-	Develop and maintain project management documents that include at least the		
	Ε	following (Project plans, Project charters, Resource agreements and breakdown structure and Responsibility assignment matrix).		
2	N.	Perform risk assessments in the early stages of projects.		
3	JRE	Define and maintain a project risk register for each project.		
4	ğ	Ensure that external information system services providers:		
	8	Comply with MoD's cybersecurity requirements.		
	€	Employ appropriate cybersecurity controls.		
5	MINIMUM-SECURITY REQUIREMENTS	Document and approve Service-level agreements (SLAs) for external information system services.		
6	SE	Restrict access to system media including both digital and non-digital media, digital		
	Š	media includes flash drives, diskettes, magnetic tapes, external or removable hard disk drives (e.g., solid state, magnetic), compact discs, and digital versatile discs. Non-		
	Ð	digital media includes paper and microfilm.		
7	Z	Maintain accountability and guarantee the protection and control of all digital and non-		
	Σ	digital media during transport outside of controlled areas using defined security measures (e.g., locked container, cryptography) that are MoD-approved, or compliant		
		encryption technologies.		
9		Prohibit or restrict the use of non-approved media on MoD information systems.		
10		Enforce data classification via software controls.		
11		Ensure that backups are properly protected via physical security and encryption when		
12		they are stored and moved across the network. Encrypt all sensitive systems data during transmission.		
13		Encrypt all sensitive systems data during storage.		
14		Ensure that all account usernames and authentication credentials are transmitted across networks using encrypted channels.		
17		Enforce sharing information decisions by authorized system and information owners.		
18		Archive the data in secure storage locations.		
19		Back up the archived data.		
20		Archive "Top Secret" and "Secret" data and shall be protected using by National Cybersecurity Authority approved encryption mechanisms.		
21		Ensure to implement data loss prevention as per "Data Protection Policy"		
22		Conduct privacy impact assessments for systems, programs, or other activities as per "Data Protection Policy"		
23		Document and approve of a matrix to manage user permissions and authorization		
		based on the following access control principles:		
		Need-to-Know Principle. Segregation of Duties Principle. •		
		Least Privilege Principle. •		
25		Ensure that information systems implement mechanisms for authentication to a cryptographic module that meet the requirements of MoD's Data Security Standard.		
26		Document and approve the discloser of and access to MoD data to external users (e.g.,		
		external partners, allies, third party, local agencies employees) and limit it based on the Need-To-Know principle.		
27		Enforce security requirements for remote connections to systems. This includes:		
		Strong passwords. • Two-factor authentication. •		
		Use of encrypted Virtual Private Networks (VPNs) per MoD's VPN •		
		security Standard.		
		Secure management of Secure Shell (SSH) keys. Employing valid TLS certificates obtained from a recognized •		
		Certificate Authority (CA).		
27		Ensure that all the information systems are registered and tagged upon receipt for to		
28		maintain an accurate list of assets within MoD's IT infrastructure. Maintain the information system inventory in a centralize Configuration Management		
20		Database (CMDB).		

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 85 من 102

29	Maintain a baseline configuration for system development and test environments that
- 00	is managed separately from the operational baseline configuration.
30	Create configurations and/or procedures for systems (laptops, iPhones, etc.) that are traveling to high-risk areas.
31	Implement approved configuration-controlled changes to the information system.
32	Ensure that testing does not interfere with system operations that support MoD's mission and business functions.
33	Ensure that the security impact analyses include reviewing: Security and privacy plans. ◆
	Policies and Procedures to understand control requirements. •
	System design documentation and operational procedures to understand control implementation and how specific system
	changes might affect the controls.
	The impact of changes on organizational supply chain partners • with stakeholders.
	Determining how potential changes to a system create new risks •
	to the privacy of individuals and the ability of implemented controls to mitigate those risks.
	Impact analyses also include risk assessments to understand the •
	impact of the changes and determine if additional controls are required.
34	Define, document, approve, and enforce physical and logical access restrictions
	associated with changes (e.g., upgrades, modifications) to the MoD information system.
35	Develop and maintain logical and physical access control lists that authorize qualified
36	individuals to make changes to MoD information system/component. Ensure systems under configuration control shall have automation in its access
37	enforcement and auditing. Limit privileges to change system components and system-related information within a
	production or operational environment.
38	Ensure that a standard set of mandatory configuration settings shall be established and documented for information technology products employed within the MoD
	information system.
39	Ensure that the configuration settings shall be implemented and exceptions from the mandatory configuration settings shall be identified, documented, and approved for
	individual components within the information system based on explicit operational
40	requirements. Ensure that the automation provides data aggregation and data correlation capabilities;
	alerting mechanisms and dashboards to support risk-based decision-making within the MoD.
41	Ensure a list of specifically needed system services, ports, and network protocols shall
	be maintained and documented in the applicable security plan; all others services, ports and protocols shall be disabled.
42	Employ network scanning tools, intrusion detection and prevention systems, and end-
	point protection technologies, such as firewalls and host-based intrusion detection systems, to identify and prevent the use of prohibited functions, protocols, ports, and
	services.
43	Prevent program execution in accordance with MoD policies regarding authorized software use which include, but are not limited to the following:
	Software shall be legally licensed. •
	Software shall be provisioned in approved configurations. Users shall be authorized for software program use.
44	Establish separation of duties and maintain a sufficient degree of independence
	between the system development and integration processes and configuration management processes to effectively facilitate quality control.
45	Use software and associated documentation in accordance with contract agreements
	such as (software license agreements and non-disclosure agreements) and copyright laws.
46	Control and document the use of peer-to-peer file sharing technology to ensure that
	this capability is not used for the unauthorized distribution, display, performance, or reproduction of copyrighted work.
47	Make sure that software license tracking shall be accomplished by manual or automated methods, depending on MoD needs.
48	Ensure usage of only licensed software and track its utilization and installation.
49	Implement critical information management mechanisms to manage confidential
	information, keys and certifications, and prevent storing confidential information in containers.
50	Isolate container infrastructure using logical or physical methods.
L	

51	Perform Static Application Security Testing (SAST) to scans the application source files, accurately identifies the root cause and supports to remediate the underlying security flaws.	
52	Ensure that the information system designed and configured to either physically or logically separate user functionality from information system management functionality.	
53	Ensure that the information system shall be configured to prevent users from performing any functions that are not explicitly authorized for their roles.	
54	Isolate security functions from non-security functions by means of an isolation boundary implemented within a system via partitions and domains.	
55	Ensure that the isolation boundary controls protect the integrity of the hardware, software, and firmware that perform system security functions.	
56	Implement layered structures to minimize interactions between security functions and non-looping layers (i.e., lower-layer functions do not depend on higher-layer functions) to enables the isolation of security functions and the management of complexity.	
57	Prevent unauthorized and unintended information transfer via shared system resources.	
58	Ensure that the host operating system temporary files creation /access by the server application shall be restricted to appropriate service processes and protected sub-directories.	
59	Ensure the protection of information system against the effects of denial of service attacks by employing appropriate security safeguards in accordance with mod's system security standard and mod's infrastructure security standard.	
60	Implement MoD cryptography mechanisms for ensuring integrity and confidentiality for communication and transmitted information.	

Communication must be encrypted, data in transit (e.g., SSH, HTTPS, TLS, IPSEC). All Application and user traffic must go through Web Application Firewall (WAF). Conduct VA scanning on all application. Application assets must be protected with anti-virus Applications server must have Minimum Security and CSCC if critical systems involved. 29	Perform full backups for applications.	
30	The backups shall include at least the following:	
	Web applications' configuration backups. •	
	Stored data and information of web applications. •	
31	Retain application backups for critical applications.	
32	Archive applications backups in an offsite storage.	
33	Document all used database systems.	
34	Prohibit direct access and interaction with databases for all users except for database administrators.	
35	Prohibit to copy or transfer the databases of sensitive systems from the production	
	environment to any other environment.	
36	Use reliable, approved, and licensed database systems.	
37	Develop a disaster recovery plan for database systems.	
38	Encrypt the database.	
39	Ensure all database systems employ central clock synchronization.	
40	Develop and manage a System Development Life Cycle (SDLC) process.	
41	Integrate cybersecurity requirements for all phases of the SDLC.	
42	Ensure outsourced partners adherence to secure code development practices and MoD security requirements.	

#	Category	Item	Yes/No	Evidence
1	AND SUPPLIER REQUIREMENTS	The cybersecurity requirements for contracts and agreements with third parties must include at least the following: No discloser clauses and secure removal of MoD's data by third parties upon end of service. Communication procedures in case of cybersecurity incidents. Requirements for third parties to comply with appropriate MoD policies and procedures laws and regulations.		
2	AND	The cybersecurity requirements for contracts and agreements with IT outsourcing and mange service third parties must also include at least the following: Conducting a cyber security risk assessment to ensure the availability of risk mitigation controls before signing contracts and agreements or upon changes in related regulatory requirements.		
3	>	The supplier or service provider must comply with all MoD's applicable cyber security policies.		
4	PART	The right to terminate the contractual obligation when the supplier or service provider violate the cyber security polices of MoD.		
5	THIRD-PARTY	The right to assess the security of the suppliers or service provider, which can include site visits, documentation review, or infrastructure security review, or compliance against the self-assessment reports provided by the suppliers or service provider.		
6		The terms of contracts and agreements with third parties must include requirements related to reporting and notifying MoD of any potential or confirmed cybersecurity incidents which may cause data loss or breach, business interruption, system damages, and insider threats.		
7	CYBERSECURITY	The contracted third parties must ensure the cybersecurity of all entities involved in their wider supply chain for their respective systems, system components, or system services and for the notification of supply chain compromises and results of assessments or audits.		
9	BER	Defining Service Level Agreements (SLAs), mutual confidentiality agreements and any required agreements.		
10	CY	Recording and reviewing identified risks during the lifetime of the arrangement with the third-party.		_

#	Category	Item	Yes/No	Evidence
1	IRD- IRTY OYE ES	Screening/vetting for all external support services companies, support services, and		
		managed services personnel working.		
2	₩₩S	Report any personnel termination or transfer for personnel that possess MoD credentials		
	도조리	and/or badges, or have information system privileges within a defined period		
3	E	Ensure that all third-party party employee's devices install all needed MoD security		
	ш ш	controls in order to ensure there is no leakage of MoD data or files.		

#	Category	Item	Yes/No	Evidence
1	c y b e	Identify and document the types of changes that control system settings.

2	Remove unused or unnecessary software and disable unused or unnecessary physical and logical ports and protocols to prevent unauthorized communication or unauthorized transmission of information	
3	Use network scanning tools, intrusion detection systems, and hardware security technologies, such as firewalls and host-based intrusion detection systems, to identify and prevent the use of prohibited functions, protocols, ports, and services.	
4	Prevent network components, server software, and firmware from being installed without verifying that the component has been digitally signed with an authorized certificate.	
5	Prevent installation unless sign recognized and approved certificates that include updated versions of software, update packages, service packs, device drivers.	

#	Category	Item	Yes/No	Evidence
1	Α.	Inclusion of cyber security controls in the system development environment		
2	RIT	Communication procedures in the event of a cybersecurity incident.		
3	SECU	Ensure that the developer of the system, system components or services provides a description of the functional characteristics of the controls to be implemented.		
4	NOIT	Ensure that the developer of the system, system components, or services provides design and implementation information for controls that include: security-related external system interfaces, high-level design, low-level design, or source code.		
5	ISIN	The developer of the system, system components or services must deliver the project with the security settings implemented.		
6	SYSTEM AND SERVICES ACQUISITION SECURITY	Ensuring that the terms of contracts and agreements with third parties and service providers include requirements related to reporting cybersecurity incidents and informing the Ministry of Defense in the event that the third party is exposed to a cybersecurity incident.		
7	RVIC	The cybersecurity services operations centers managed for operation and monitoring, which use the remote access method, be located entirely within the Kingdom.		
8	ND SE	That contracts and agreements include provisions for maintaining the confidentiality of information (Non-Disclosure Clauses) and secure deletion by the external party of the Ministry's data upon termination of service		
9	EM A	Reviewing and testing the changes made to the informational and technical assets of the Ministry of Defense before applying them to the production environment.		
10	YSTE	The concerned parties in the Ministry of Defense must be informed of the major changes that are planned and made to the information and technical assets of the Ministry.		
11	်	Correcting security vulnerabilities identified as a result of testing and evaluation by the Cyber Security Department		
12		Manage system settings during design, development, implementation, operation, or final disposal		

#	Category	Item	Yes/No	Evidence
1	Z.	Ensure that all information systems assets are recorded and flagged upon receipt to maintain an accurate and clear list of assets within the IT infrastructure		
2	Σ	Labeling all information system assets and related devices		
3	ASSET MANAGEMENT	Ensure that at least the following information is recorded in the asset list: (a) Description of the asset: 1) the name. 2) IP address. 4) The operating system. 5) Total Disk. 6) Total Memory. 7) Classification of purpose (what is it used for). (b) the place: 1) The site. (c) Item details: 1) Model. 2) Serial Number (S/N). (d) element support: 1) Center/Department (Who uses this asset?). 2) Technical support (which center/supplier usually fixes these device issues?).

1	IRITY	Separation of user functions (including user interface services) from system administration functions (for example, functions necessary to administer databases, network components, or servers).	
2	ECU	Ensure that the information system is designed and configured to separate (physically or logically) user functions from information system management functions.	
3	SYSTEM SECURIT	All records shall be sent to the Cyber Security Monitoring and Event Log Management (SIEM) system in order to manage the records and analyze their content and relationship to each other.	
4	SYS	Separate security functions from non-security functions by isolating port boundaries within the system by partitions and domains.	
5		Protect the confidentiality and integrity of communications and information transmitted both in internal and external networks and of all types of information system components.	
6		To ensure that all communications that transmit sensitive and confidential information and data between web clients and web servers use the latest secure transmission protocols such as:	
		(a) Secure Sockets Layer (SSL) protocol. (b) Transport Layer Security (TLS) protocol. (c) Secure Remote Connection (SSH) protocol.	
7		Not to use unencrypted messaging techniques to transmit any kind of sensitive information and data in order to maintain its confidentiality.	
8		Terminate the internal and external network connection associated with the communications session at the end of the session or after a period of inactivity.	

#	Category	Item	Yes/No	Evidence
1	νį	Allowing only whitelisting for critical systems' firewall access lists.		
2	ESSENTIAL CYBERSECURITY CONTROLS	Prohibiting access to critical systems from mobile devices except for a temporary period only, after assessing the risks and obtaining the necessary approvals from the cybersecurity function in the organization.		
3	ပ္ပ	Conducting compliance test for software against the defined MOD cybersecurity requirements		
4	Ē	Secure integration between software components		
5	CUR	Conducting a configuration review, secure configuration and Harding and patching before going live for software product.		
6	SS	Privileged Access Management		
7	YBEF	User authorization based on identity and access control principles Need to know need to use, Least Privilege and Segregation of Duties		
8	۲. ۲.	Logical or physical segregation and segmentation of network using firewall and defense $-$ in $-$ depth principles		
9	È	Network segregation btween production, test and development environment		
10	Ä	Intrusion Prevention System (IPS) and Security Domain Name Service (DNS)		
11	ES	Cybersecurity requirements for protecting and handling data must implement: Data and information ownership. Data and information classification and labeling mechanisms Data and information privacy		
12		Cybersecurity requirements for cartography must implement: Approved cryptographic solutions standards and its technical regulatory limitations. Secure management of cryptographic keys during their lifecycles. Encryption of Data in-transit and at-rest as per classification and related laws and regulation		
13		Cybersecurity requirements for backup and recovery must implement: Scope and coverage of backups to cover critical technology and information assets Ability to perform quick recovery of quick recovery of data and system		
14		Cybersecurity requirements for Vulnerabilities: Vulnerabilities assessments. Vulnerabilities classifications based on criticality level. Vulnerabilities remediation based on classification and associated risk level.		
15		Cybersecurity requirements for Penetration Testing: cope of penetration tests which must cover Internet-facing services and its technical components including infrastructure, websites, web applications, mobile apps, email and remote access.		

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 90 من 102

16	Non-disclosure clauses and secure removal of organization's data by third parties upon
	end of service.
17	Requirements for third-parties to comply with related organizational policies and
	procedures, laws and regulations.

#	Category	Item	Yes/No	Evidence
1	٥	Prohibiting remote access from outside the Kingdom of Saudi Arabia		
2	TROL	Using multi-factor authentication for privileged users, and on systems utilized for managing critical systems stated in control.		
3	N	implementing a high-standard and secure password policy.		
4) }	Utilizing secure methods and algorithms for storing and processing passwords, such as: hashing functions.		
5	CRITICAL SYSTEMS CYBERSECURITY CONTROLS	Prohibiting direct access and interaction with databases for all users except for database administrators. Users' access and interaction with databases must be through applications only, with consideration given to applying security solutions that limit or prohibit visibility of classified data to database administrators.		
6	Ë	Applying security patches and updates at least		
7	СУВ	Encrypting the network traffic of non-console administrative access for all technical components of critical systems using secure encryption algorithms and protocols.		
8	SME	Reviewing and changing default configurations, and ensuring the removal of hard-coded, backdoor and/or default passwords, where applicable.		
9	YSTE	Protecting systems' logs and critical files from unauthorized access, tampering, illegitimate modification and/or deletion.		
10	S	Logically and/or physically segregating and isolating critical systems' networks.		
11	CAI	Reviewing firewall rules and access		
12	CRITI	Prohibiting direct connection between local network devices and critical systems, unless those devices are scanned to ensure they have security controls that meet the acceptable security levels for critical systems.		
13		Prohibiting critical systems from connecting to a wireless network.		
14		Protecting against Advanced Persistent Threats (APT) at the network layer		
15		Prohibiting connection to the internet for critical systems that provide internal services to the organization.		
16		Protecting against Distributed Denial of Service (DDoS) attacks to limit risks arising from these attacks.		

#	Category	Item	Yes/No	Evidence
1	S7ı	Screening and Vetting Candidate in job related to data migration who have access to the data.		
2	ITRO	Strict restriction to allow only minimum number of personnel accessing, viewing data based on list of privileges limited to Saudi national employees.		
3	NO.	Disabling the print screen or screen capture on the devices		
4	۲ د	Using of BYOD devices is prohibited		
5	IRIT	Using watermark feature to label the whole documents		
6	ECU	Using Data Leakage Prevention -DLP- technologies and Right Management technologies.		
7	:RS	Implement controls to protect data: (Data Masking and Data Scrambling		
8	DATA CYBERSECURITY CONTROLS	Using secure and up-to-date cryptographic methods and algorithmic when transmitting data for overall network communication medium as per the requirements of "advances level" in the National cryptographic stander (NCS-1:2020)		
9	DAT/	Requiring contractual commitment to securely dispose MOD ministry data at the end of the contract or case of contract termination, including providing evidences of disposal the MOD		
10		Documenting all data sharing operations within Third party, including data sharing Justification.		
11		Requiring third party to notify the MOD in case of cybersecurity incident that may affect data that has been shared.		
12		Screening or vetting consultancy services employees who have access to the data		

رقم الكراسة:	رقم النسخة: الأولى	تاريخ الإصدار:	رقم الصفحة 91 من 102

13	Requiring contractual commitment by consultancy service including employees Non-	
	Disclosure Agreement and secure disposal the MOD data at the end of the contract or in	
	case termination, including providing evidences of such disposal to MOD	
14	Before sharing data with consultancy services using Data Masking, Data Scrambling.	

#	Category	Item	Yes/No	Evidence
1	Ŋ	Comply with Firewall Security Standard		
2	rrol	Control the flow of network traffic between networks or hosts that employ differing security postures to increase the protection for internal networks and hosts		
3	NO	Follow the "least privilege" principle and deny all inbound and outbound traffic by default on all Firewall implementation		
4	רר כ	Use Firewall filters to restrict or block system services based on MoD ports, protocols, services Management database and best practices		
5	FIREWALL CONTROLS	Treat the firewall configurations and associated documentation as confidentially sensitive information and it must be available to only authorized personnel (e.g. authorized administrators, auditors, security oversight personnel)		
6	Ħ	The firewall must have at least three (3) interfaces, one for the internal network area, the second for the untrusted external network area, and the third for an intermediate security area		
7		Configure Firewall to detect and prevent all type of denial-of-service attacks including flooding attacks, ICMP flood, SYN flood, IP address sweep attack, IP Spoofing, TCP/UDP sweep attacks and port scanning attacks		
8		Define physical and logical access control for firewalls based on Access Control Standard		
9		Deploy firewall on a dedicated machine with all the unnecessary and/or non-secure functions, ports, services and protocols being disabled		
10		Firewalls shall include at least one or more intrusion detection and/or intrusion prevention methods\systems.		
11		Submit a diagram and/or a list of permissible paths and a description of permissible services accompanied by a justification for each firewall for approval prior to the deployment of a firewall		
12		All firewall interfaces shall be assigned a security zone in accordance with the network it protects. All inter-zone and intra-zone connections should be denied by default.		
13		Restrict firewall administration access to be allowed only by connecting through a console cable to a dedicated terminal or alternatively through privileged identity management system (where applicable).		
14		Install firewalls only on a hardened and routinely patched operating system.		
15		Use firewall in conjunction with a router when connecting to the Internet to prevent denial- of-service attacks and successful cracker penetrations.		
16		Firewall activities must be logged and monitored on a continuous basis		
17		Store firewall logs in a secure central logging server with NTP synchronization enabled.		
18		Back up Firewall logs on a regular basis. Store and maintain Logs for future reference and/or legal protection requirements		
19		Install firewall patches and the patches must be tested		
20		Back-up Firewall configuration settings periodically and before applying updates to ensure that existing settings are not inadvertently lost		

#	Category	Item	Yes/No	Evidence
1	TROLS	Use multiple types of IDPS technologies such as (network-based, wireless, network behavior analysis (NBA and Host-Based)) to achieve more comprehensive and accurate detection and prevention of malicious activity.		
2	·	Ensure the selected IDPS products are sufficiently reliable to meet MoD security requirements.		
3	S CON	Continuously update the IDPS databases with the latest attack signature information changes.		
4	IDPS	Ensure that the IDPS send information to centralized logging servers and Security Information and Event Management (SIEM) solutions to perform log analysis and send alerts.		
5		Monitor and scan inbound communication traffic of IDPS systems 24 hours, 7 days a week for unusual and unauthorized activities.
